

TRAPP CONNECT PARTNERS WITH ZCOLO DATA CENTERS TO LAUNCH ULTRA-RELIABLE INTERNET ACCESS

Blended bandwidth Internet to be offered in Phoenix, Las Vegas, Seattle and Chicago

Scottsdale, AZ. – September 30, 2013 – Scottsdale-based [Trapp Connect](#) today announced a three-month roll out of its affordable, ultra-reliable Internet service for business to [zColo](#) facilities in Phoenix, Las Vegas, Seattle and Chicago. [zColo](#), a wholly owned subsidiary of [Zayo Group](#), provides carrier-neutral, interconnection focused colocation services in 25 data centers throughout the U.S. Already live in Phoenix, Trapp Connect's Border Gateway Protocol (BGP) Internet mesh provides the advantages of improved performance and reliability through route optimization over a blend of bandwidth from multiple Tier 1 carriers.

"Our relationship with zColo is conducive to our growth and expands Trapp Connect's footprint to the national scale that our customers demand," Says Cody Engilman, Director of Sales and Marketing for Trapp Connect. "Leveraging our best-in-class BGP blend with Zayo and zColo's robust fiber network enables Trapp Connect to give the end user the most diverse, scalable, BGP Blend solution on the market today."

Trapp Connect leverages its carrier class network architecture, advanced data security, and a blend of top IP carriers to reduce latency and make possible a 100% uptime guarantee. Fast, reliable, and redundant service from Trapp Connect gives business customers the flexibility to withstand carrier outages or performance problems by automatically adapting to changes on the Internet.

"zColo's broad data center footprint is well aligned with Trapp Connect's nationwide rollout, and we view the blended BGP offering as a robust and unique solution in an often crowded marketplace" says Greg Friedman, Vice President of zColo. "This offering will be relevant for many existing and new Zayo customers."

The roll-out announced today adds an advanced ISP to zColo's data centers with customizable route selection, carrier preference, and distributed denial of service (DDOS) mitigation. Through this strategic relationship, Trapp Connect can now provide a comprehensive blended IP service to zColo customers, and a unique blended offering to complement Zayo's existing IP portfolio.

About Trapp Connect

Trapp Connect, a division of Trapp Online, brings improved Internet reliability, performance and security to companies around the world. Customers enjoy easy-to-manage, constant Internet connectivity and mind-blowing 24/7 support and monitoring from an experienced US-based team with a level of technical expertise that is above the typical ISP or data center.
