Share content and applications with your external customers, partners and stakeholders without the user management headaches

Automate SharePoint Provisioning and External User Access

AuthentiMate embraces the Bring your Own Identity "BYOID" principles by allowing external parties to connect to your SharePoint environment using credentials from popular social services they already use such as Microsoft Account (Live ID), Google+, Yahoo, LinkedIn and FaceBook. It also provides a large range of functionality to address the complexity of configuring user management, federation and single sign on settings in your SharePoint solutions.   With AuthentiMate you can:

- **Simplify content sharing** with external users by enabling business users are able to initiate, approve and complete access requests to external parties without involving your IT department resources.

- **Eliminate external user management hassles** by allowing users to use and manage their own existing user name password combinations.

- **Automate the registration process and account provisioning** – end users are able to complete registration process in as little as three clicks using credentials from Microsoft Account (Live ID), Google+, Yahoo, LinkedIn, Facebook services they are already signed up for and proceed to accessing your extranet.

- **Monitor what content is shared and for how long** – access can be granted for a period of time, extended or be automatically revoked for any external party; Easy-to-read audit reports uncover content your external parties have access to.

Federated Sign-on to a SharePoint Site

With AuthentiMate, you can enable external access to your SharePoint 2010 and 2013 sites using popular cloud identity providers including Yahoo, Microsoft Account (formerly Live ID), LinkedIn, Google, Facebook and Twitter. It is also capable of integrating with third-party membership association systems such as Conveo, Avectra, Personify and iMIS to allow you to convert you member lists automatically into ready-to-engage user interactions on your published SharePoint extranets and compatible web sites.
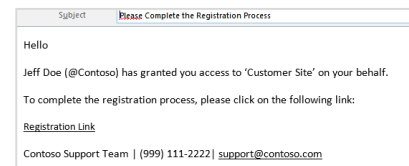

Content Sharing with External Parties

AuthentiMate leverages built-in SharePoint 2013, and supplements SharePoint 2010 sharing capabilities to allow your business users to share content with external parties. Just enter an email address and AuthentiMate handles the rest of the user registration process.
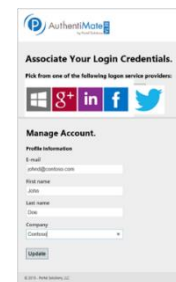

Simple Registration Process

One of the common challenges facing extranet deployment is ensuring user can be trusted to access the system. The AuthentiMate Two-Step Identity Verification option further enhances security of your content by requiring the initiator and invitee to connect offline to ascertain identity of the user prior to granting access.

Personalize and Configure

AuthentiMate invitation email and registration pages can be branded to maintain your online corporate look and feel and support recognition of your brand in interactions with your external users.

Secure Cloud and Microsoft Azure

AuthentiMate integrates tightly with Windows Azure Active Directory - a secure cloud service developed by Microsoft - for storing information entries about your users and pairs those entries with any number of external identities. Consequently, user authentications facilitated by AuthentiMate do not result in lock-in, but are rather broadly available as a part of your organization's Azure Active Directory information to other compatible applications, with your organization retaining 100% control and ownership of the data.
