

The analysts are talking...

"48% of CIOs surveyed believe they will become leaders in their industries by fully adopting innovative mobility solutions."

Gartner
Magic Quadrant for Mobile Application Development Platforms, October 2012

"For maintenance work order processing, a custom-developed app on the mobile device can often do a better job of addressing an individual organization's requirements than configuring a COTS solution."

Ralph Rio, Research Director
ARC Advisory Group

Our clients are talking....

"Sempra Utilities chose Interloc's Mobile Informer ... a native to Maximo application requiring no middleware that allows us to be more agile and productive and the Interloc team showed the strongest expertise and knowledge in Android and iOS development."

Lev Berkovich, Project Manager,
Southern California Gas, Sempra Utilities

"Interloc Solutions is great to work with! The Interloc Mailer and the Interloc Mobile Informer products combined provide GTC/OPC businesses flexible mobile solutions that streamline our Maximo Industry Solution Work Management, Inventory processes, and approval processes, delivering near real-time responses from any work location"

Catherine Lai, Business Application Consultant
Georgia System Operations Corporation

"With Mobile Informer, we were able to get a mobile solution for Maximo that was exactly what our business needed and our users wanted – developed and deployed in a matter of weeks."

“Workers were up and running within minutes; development staff needed less than 4 days of training on Mobile Informer apps; and the business benefits were so immediate that we doubled our Mobile Informer deployment in less than a year!”

Ed Larson, Facilities/Maintenance Specialist
ATK AeroSpace

Interloc brings innovation to mobilizing Maximo

Mobile Informer is a mobility platform that provides:

- Seamless connected/disconnected operation
- Continuous, near real time updates
- Client-defined, industry-specific applications, requiring little to no user training
- GPS/GIS integration of Maximo assets & locations, even disconnected
- The ability to quickly track assets via barcode/RFID scanners
- Management within Maximo; no middleware required
- Quick adoption with continual ROI
- Smart device options, such as iOS and Android

Mobilizing Maximo makes business sense

The adoption of smart phones and tablets for business is exploding. Whether it’s an iOS or Android, smart phone or tablet, workers are eager to adopt these new devices and businesses are excited to harness new technology. The statistics are staggering:

- 424.9 million Tablets will be sold by 2017 (Pew Research Center)
- Two-thirds of enterprises plan to have Tablets deployed by year end 2013 (IBM Research)
- 87.7 million Android devices were shipped to businesses in 2012 (IDC)

For organizations wanting to maximize the value of critical business assets by enforcing best practices, the benefits of mobilizing their workforce are tangible and add up to increased return on investment (ROI).

Recently Ralph Rio, Research Director at ARC Advisory Group, the leading Global Market Research Firm for Automation, Asset Management and Supply Chain Solutions, noted that mobility can cause transformational change for maintenance organizations.

The case for mobilization of your maintenance staff is clear. The question remains, “How do I implement a mobile solution that achieve business benefits and user acceptance?”

Successful Maximo mobilization

Mobile Informer is a mobility platform built directly within Maximo that delivers lightweight, extensible mobile applications on smart device platforms (such as iOS or Android), requiring no middleware software. Built with your business processes, field workers, and Maximo administrators in mind, Interloc developed Mobile Informer. Mobile Informer applications deliver on the principle of doing the simplest thing possible for the greatest benefit.

Supporting the smart devices your workers want (iOS and Android), Mobile Informer provides streamlined applications that are readily adopted by your field workers, requiring little to no user training.

Mobile solutions are most successful when user adoption is high and mobile applications are tightly aligned to support and enhance end user work processes. We approach your mobility projects by understanding your mobile users’ work processes. Obtaining buy-in from both field workers and management leads to mobile applications that directly support and enhance your processes.

Our proven process starts with you:

- We start with a core application on a native platform
- You define how you do work
- We work with you to mock up screens for your review to ensure we have captured your appropriate work flow
- Upon approval, we complete development and deploy in your Maximo environment

The result is widespread and successful user acceptance of mobile applications that do the simplest thing possible — empowering your field workers and your Maximo Administrator!

Award winning mobility on iOS and Android — now with disconnected GIS capability

Winner of the IBM 2012 Tivoli Best of Show Award and Finalist for the IBM 2013 Beacon Award for Best Solution to Optimize the World’s Infrastructure, Interloc’s Mobile Informer couples the power of Maximo itself with the smart device features.

It is the only mobile solution that can mobilize any Maximo work process configuration or Maximo industry solution in a connected or disconnected state. With Mobile Informer applications, you can adhere to regulatory compliance, be aware of GPS/GIS locations, or quickly perform inventory via barcode/RFID scanners. Anything that you can do in Maximo can now be done on your mobile device. Returning that data to Maximo in near real time, a Mobile Informer client application lets you gather data quicker and smarter, giving you the ability to making informed choices. And now activeG’s InformME product married with Mobile Informer brings GIS data (even disconnected) and Maximo together in the field.

Validated IBM Ready for Tivoli, Mobile Informer provides for lightweight, extensible client-defined applications that directly communicate with Maximo via web services. This provides the ability to work disconnected while seamlessly delivering continuous near real-time updates throughout the day as connectivity is reestablished.

Mobile Informer manages the heavy-lifting and complexity of mobilizing Maximo, allowing for client-defined applications to support each business process, while leveraging the new technology advantages of current smart devices.

Leveraging the power of Maximo

Native within Maximo, Mobile Informer is deployed from within Maximo on the Maximo server thus accommodating virtualization, clustering and ease of hosting due to the elimination of the need for middleware. Near real-time updates are managed seamlessly by the device; cradle syncing is a thing of the past as Mobile Informer uses native device push technology.

Administrative functions including device, user, session management and others are all performed within Maximo itself. Built on the Maximo Web Services APIs, Mobile Informer is Maximo version agnostic.

The unique, open architecture of Mobile Informer on the iOS and Android devices let you easily modify your mobile applications as business needs arise. That means that whatever work processes you can do in Maximo you can take down to your mobile device – simply.

Mobile Informer gives you the freedom to create client defined applications that match the needs of your business in the field, in both connected and disconnected mode, on the platform of your choice, managed seamlessly. By providing a mobile application that mirrors workers known processes in the field— Mobile Informer is truly successful mobility for Maximo!

Architected exclusively for Maximo, built entirely within Maximo, and delivered by a company 100% committed to Maximo.

About Interloc Solutions

Interloc Solutions is a recognized leader in providing innovative Maximo consulting services and industry and product solutions. With years of proven consulting services experience in key industries, we will work to provide fast and continual ROI from your Maximo software investment.

Our team of highly experienced technology and business professionals excels at providing comprehensive, reliable solutions to address enterprise asset and service management needs. 100% dedicated to providing Maximo solutions and services for over a decade, Interloc’s consulting services team is experienced in implementing, upgrading, and integrating Maximo and related products.

100% Maximo focused, IBM AAA technical accreditation, Ready for Tivoli validated products, 2013 Beacon award finalist for Best Solution to Optimize the World’s Infrastructure, and winner of two IBM Pulse awards for 2012 Best of Show and Smarter Planet for Asset Management for project excellence — Interloc Solutions is in a unique position to be your Maximo consulting services trusted partner.
