Enkitec Oracle Database & Exadata Services

Enkitec's Oracle Database solutions can help lower IT costs and improve efficiencies in your environment. Our database solutions are custom designed to meet your business needs. From consolidation to workflow improvement initiatives, we offer a variety of reliable solutions and secure approaches for enterprise applications, data warehouses and big data analysis. Our consultants average 15+ years of real-world Oracle implementation experience.

Oracle Database Solutions & Services:
- Oracle Exadata Services
- Oracle Exadata Quarterly Patching Services
- On Call DBA Services
- Database Design, Architecture & Roadmap
- Database Performance, Tuning & Expert Diagnostics
- Backup, Recovery, Failover & Disaster Recovery
- Oracle Upgrades, Re-Platforming & Migrations
- Replication and Synchronization using Streams, GoldenGate & DataGuard
- Partitioning & Information Lifecycle Management
- Oracle Security Assessment

In addition to our Database Platinum Specialization, Enkitec is a member of the Oracle Database Upgrade Partner Program. Our Oracle DBA experts have performed hundreds of Oracle Database 11g upgrades across every hardware/OS platform and release of the Oracle Database. No two upgrades are exactly the same. Our objective is to provide the most cost-effective upgrade solution tailored to meet your requirements.

We have successfully completed:
- Upgrades to Oracle Database 11g from releases prior to Oracle Database 10g
- Upgrades of mission critical databases that require parallel production environments
- Re-platforming or cross-platform upgrades (i.e. switching OS/Hardware)
- Migration of very large databases and data warehouses

Enkitec Exadata Services:
The Oracle Exadata Machine delivers the world's first database system that supports reporting (OLAP), data warehousing, Oracle Data Mining and online transaction processing (OLTP). It does it all faster, better and more economically than any other platform. Enkitec has been involved with Exadata since its inception and we have been involved in more Oracle Exadata implementations than any other Oracle partner in the world.

From the Exadata evaluation stage to migration, Enkitec has the expertise to make your Exadata project run smoothly. Our test lab includes multiple generations of Exadata, which allows us to easily evaluate the Exadata solution using your data and queries. We also offer ongoing managed services to help you manage your environment after the migration is completed.

Enkitec offers patching services for Exadata as well. Our Exadata experts will collaborate with your IT team to determine whether rolling or non-rolling Storage Server patches are appropriate.
