

## FOR IMMEDIATE RELEASE

**AOMi Announces Webinar Through PEX Network,** "Powerful Management Metrics to Drive Effective Behaviors and Generate Exceptional Business Results" **October 15, 2013** 

Syosset, NY, Cleveland, OH, October 8, 2013 -- **AOMi,** who offers the innovative approach to operations management, focusing front-line managers and their staff on the achievement of quality and service levels at the optimum cost, today announced the webinar titled, "Powerful Management Metrics to Drive Effective Behaviors and Generate Exceptional Business Results."

The famous Peter Drucker quote "what gets measured, gets managed" guides so much of business thinking today. Businesses use Key Performance Indicators (KPIs) to keep on eye on what's going on in the organization and make sure that things are on track. But are you using the right set of metrics and techniques to drive the kind of behaviors that will get you the best results?

A poorly designed set of KPI's can hide a lot of unproductive busy work and can lead the organization to focus on putting out fires. Equally, more and more business professionals are realizing that the old method of applying quota to the work that their teams are performing is yielding less results as team members work to the standard quota and are not set up to exceed or work above the standard. The same is true that a current set of KPI's can hide a lot of unproductive busy work. This leads the business to be:

- Reactive to change instead of proactive to change
- Driven by a higher need for temporary staff or greater overtime costs
- Dealing with crises, not in control
- Have increased backlogs

Operating with significant hidden capacity

Key Performance Indicators use metrics, but not every metric is a good candidate for a key performance indicator.

In this webinar, join Active Operations Management and the Managing Director of Operations – Investments at National Bank of Canada for a thought provoking webinar on how you can move beyond traditional metrics to a new style of management.

## Join this webinar to:

- Understand a better way to approach KPI's to yield the maximum results and discover why a focus on quotas can be counter productive
- Learn the power of converting excess and shortfalls in capacity to bottom line savings
- Identify the importance of empowering front line managers and how you can use
  "behavioral metrics" to generate exceptional production results
