

**October 11, 2013**

**iPatientCare successfully demonstrated the Meaningful Use Stage 2 and ICD-10 Ready EHR and Practice Management System at MGMA 2013 Annual Conference, October 6-9, San Diego, California**

This year too MGMA delivered definitive educational resource for health information technology. Like every year the conference hosted thousands of administrators, physician executives, chief executive officers and chief operating officers from various specialties and organization types and sizes. Leading healthcare professionals from around the United States attended the event to enhance their knowledge and skills and keep up to date with the newest in recommended practices.

iPatientCare has been exhibiting at MGMA every year and gets some of its technology officers, application specialists, and business development managers to receive a large base of its customers, channel partners, and business partners. Health IT Professionals consider MGMA as a great platform for acquiring more knowledge,

networking, and exhibiting new products and solutions.

More than hundreds of health care professionals stopped and spent time at the iPatientCare booth #522 during the Medical Group Management Association 2013 Annual Conference in San Diego, Calif. last week. In addition to an intense focus on the upcoming transition to ICD-10, visitors expressed a keen interest in HIPPA Compliance and Meaningful Use Certified EHR, Booth activity hits peak levels. The pressure from regulatory mandates and the shift toward value-based payments drove significant traffic to our booth. Practices need solutions to help them optimize today's world of fee-for-service.

Conference attendees learned about Implementing ICD-10, physician portals, EHR optimization and compliance, and even one on the seven symptoms of a troubled EHR implementation.

iPatientCare successfully attended MGMA 2013 and initiated planning for HIMSS 2014, the next big event coming up early next year!
