

InVision SecureSM

School Safety Portal

Everyone agrees that school safety is more important than ever, and that emergency planning is a critical step in ensuring safe learning environments. But most emergency operations plans (EOP) stop at the outside of buildings, creating dangerous blind spots for emergency responders. PenBay Solutions has developed the InVision Secure School Safety Portal to supplement existing emergency planning efforts, eliminate those blind spots, and provide a framework for sharing this information throughout school districts and with first responders. This comprehensive approach means that planners and first responders have access to critical information before, during, and after an incident to effectively reduce the impact on your students, teachers, staff and school facilities.

SCHOOL SAFETY CHALLENGES

In the event of an emergency, whether a natural disaster or a man-made incident, the effectiveness of your response can mean the difference between lives saved or lost, and between property destroyed or protected. The basis for effective school emergency operations planning often lies in overcoming the challenges around having accurate, up-to-date information about the environment, planning for appropriate resource and personnel response, and understanding the physical environment and location of the incident.

EASILY & SECURELY PLACE FLOOR PLANS ONLINE AND VISUALIZE EMERGENCY DATA ON A MAP WITH THE INVISION SECURE SCHOOL SAFETY PORTAL

Having key information - like current, accurate facility floor plans and campus maps - securely accessible online for your staff and emergency responders is critical. The InVision Secure School Safety Portal (IVS-SSP) is a powerful, cost-effective online portal specifically designed to help you meet these challenges. **This highly secure offsite platform lets schools create and maintain all-hazard emergency pre-plans and responses using a simple map-based interface, providing immediate access for authorized emergency responders and school personnel, for a single school or across the entire district.**

At the district level, authorized users can see across all their school locations, and check in on planning data and status.

Easily & Securely Place Floor Plans Online and Visualize Emergency Data on a Map

KEY BENEFITS OF THE INVISION SECURE SSP ALL-HAZARD EMERGENCY PLANNING & RESPONSE SOLUTION

- ▶ **Visualize:** easily view your facility floor plans, campus, and emergency equipment online, on a map.
- ▶ **Share:** securely share your data online with your EOP school staff, police, fire and other emergency response groups. You can also print to PDF and out to paper.
- ▶ **Secure:** your data is safely and securely stored offsite - if your computers and documents are destroyed in a disaster, your emergency plans will remain readily accessible by your designated staff and emergency services.
- ▶ **Maintain:** Because your plans are online, they are easier to update and maintain, making them more useful for emergency personnel, better ensuring the safety of your students, teachers and staff.

KEY FEATURES OF INVISION SECURE SSP

- ▶ **Create and update pre-planning features** for a full range of critical items including Utility Shutoff Locations, Rally Zones, Building Access Points, Knox Boxes, Fire Hydrants, Standpipes, Extinguishers, and many more NIMS compliant templates.
- ▶ **Supports quick viewing and retrieval of emergency plans for multiple scenarios:** Building Evacuations, Fire Safety Plans, Shelter in Place Plans, and Building Lockdown Plans.
- ▶ **Enables collaborative plan creation between school officials and local public safety agencies,** including Fire, Police, and other Emergency Service organizations.
- ▶ **Complements your existing planning efforts,** and serves as an off-site point of access for tactical information related to those plans.
- ▶ **Attach images, documents, or links to other systems** related to pre-plan features, located either inside or outside your school building.
- ▶ **Intuitive tools for adding existing emergency plans to buildings,** including sizing, transparency, placement, and orientation to the campus map.

PART OF THE INVISION SUITE OF SOLUTIONS FROM PENBAY

The IVS-SSP is an affordable, entry-level edition of InVision SecureSM designed to meet the specific needs of K-12 schools and districts. InVision Secure is a robust, modular software platform designed to be highly configurable and extensible to address a wide range of safety and security workflows. As part of PenBay's InVision suite of solutions, InVision Secure leverages a common, consistent data foundation, bridging the gap between up-to-date facilities management information and the need for accurate facilities data in emergency response situations.

The InVision Secure School Safety Portal is well suited for independent schools and small to mid-size districts. If your organization has more complex needs, InVision Secure includes all these features and more.

Other applications in the PenBay InVision solution suite include InVision FMSM for more efficient facility management and operations throughout the facility lifecycle, and InVision InSiteSM which addresses many of the spatial challenges associated with site selection, facility design and construction planning.

InVision Secure SSP: FAST & AFFORDABLE

The IVS-SSP is an easy-to-use, affordable, map-based system that integrates interior floor plans, emergency asset data and maps of the surrounding areas. Powered by PenBay InVision technology, we can have your all-hazard emergency system up and running with accurate plans in 30 days.
