InstallAware 18

Advanced Unicode Hybrid Installers Made Easy

InstallAware has been named a "**Leader of the Software Development Industry**" by SD Times in 2013 and 2012. Enjoy unequalled capabilities like 5x better compression and Partial Web Deployment™ for the smallest download packages, unlimited Web Updates, and hybrid 64/32 bit MSIs that target all versions of Windows.

Powerful — Yet Easy To Use
Skip the hassles of manually populating MSI tables or troubleshooting custom actions. InstallAware provides all the power of Windows Installer technology, with the simplicity of an advanced point-and-click development environment.

Ground Breaking Innovations
InstallAware's unique technology provides:

▶ **Direct Deploy** — *Push any EXE or MSI setup through Active Directory*
Replicate any EXE or MSI installer on all computers connected to an Active Directory network, without needing any specialized client or server software!

▶ **App-V Builder** — *Build and inspect App-V application virtualization binaries*
The App-V Builder creates an App-V application virtualization package out of any existing InstallAware project – with nothing new to learn! The App-V Viewer lets you open and inspect the folders, files, registry keys, environment variables, shortcuts, file types, and virtual services contained inside ay App-V binary.

▶ **Partial Web Deploy** — *Only download files if they're required on the target*
InstallAware's unique Partial Web Deployment allows your setup to call out to a URL to retrieve any required file or set of files — keeping the application components, runtimes, or dependencies that already exist on an end user's system from being needlessly downloaded by the user.

▶ **1-Click Patching** — *One-step MSP-generation with byte-level file differencing*
Just point-and-click on your old and new setups, click Build Patch, and InstallAware automatically generates a native Windows Installer (.MSP) file and packs it with InstallAware's industry-leading compression.

▶ **Unlimited Web Updates** — *Now with dynamically updated software bundles*
InstallAware web updates are available in three modes. Automatic guarantees latest version application delivery, and is ideal for building dynamically updated third party bundles. Manual creates a Start Screen shortcut. Scheduled mimics Windows Update. Plus no additional fees are ever charged for usage.

Perfect for Power Users
Though InstallAware is simple enough to use without programming skills, it provides an unmatched set of features for the advanced setup developer.

- **Two-Way Integrated IDE**
  Use the visual designer to instantly and automatically generate MSIcode scripts, switch to the MSIcode view to control every aspect of the setup.

- **MSIcode**
  InstallAware's powerful MSIcode manages Windows Installer conditions, installation sequences and syntax with a human-readable setup script.

- **Hybrid 64/32 Bit Windows Support**
  Only InstallAware allows you to ship a single hybrid MSI that targets 32 bit and 64 bit versions of Windows simultaneously, switching at runtime.

- **IIS Support**
  Install and configure IIS websites, virtual folders, and application servers. Now with support for IIS version 8.

- **Extensive Database Support**
  InstallAware connects to and runs SQL statements on Microsoft SQL Server, My SQL, Oracle, and Oracle .NET without requiring any database client software. Now includes SQL Server instance detection.

- **Fastest Setup Capture in the Industry**
  Simplify setup migration by capturing changes made to a system by your legacy installer. Also, convert third-party installations to MSI.

- **Driver Install Frameworks (DIFx) Support**
  Install drivers on x86, x64, and ia64 platforms. Optionally check for presence of the device. Complete sample project included.

Create the Most Impressive Setups
InstallAware's advanced interface tools will give your users the best initial-setup experience in the industry.

- **Stunning Setup Themes**
  InstallAware's 17 unique and highly customizable setup themes let you fully support Windows Aero, Glass, and Aero Wizard standards.

- **Simple Custom Dialogs**
  Powerful dialog-editing tools let you handle any task. Build interactive progress indicators, Flash-animated billboards, tabbed navigation, and even capture progress from nested setups like the .NET Runtime.

ASP.NET Web Automation Interface
Produce web sites which build and deliver customized installers, all in response to user clicks on a web page. Completely eliminate traditional manual integration steps and their extra cost. Ideal for building software bundles!

InstallAware

InstallAware Software focuses on software installation and compression technologies for the Windows Installer platform. InstallAware is supported by thousands of users worldwide, and was named a "**Leader of the Software Development Industry**" by SD Times in 2012 and 2013. For more information: www.installaware.com.
