

The Orion Security Network

GPS Tags

ORION
SECURITY

The Orion hotspot network is the low cost tracking solution for assets using GPS tags. There are no SIM charges and no other running costs involved, simply fit the unit and forget about it.

The Orion system is based on many years of incremental development work. The system has three parts, the GPS tag, the gateway and the application. The GPS tag is fitted to the asset, the gateway is connected into the Ethernet. The data is available through an API, a browser based application or App.

How it works

The GPS tags are located by the Orion hotspot network. A hot spot network is similar in concept to a WiFi network but the range is ten to fifteen times greater on average. This means that an Orion tag's presence is reported by all the hotspots it encounters in the country.

As the number of users increases, so the number of hotspots increase and so the coverage gets better.

There are also mobile Orion hotspots running off 3G, that move about the country and are part of the national recovery network. This is in addition to the recovery specialist known as 'finders' that collect a bounty on the asset recovered.

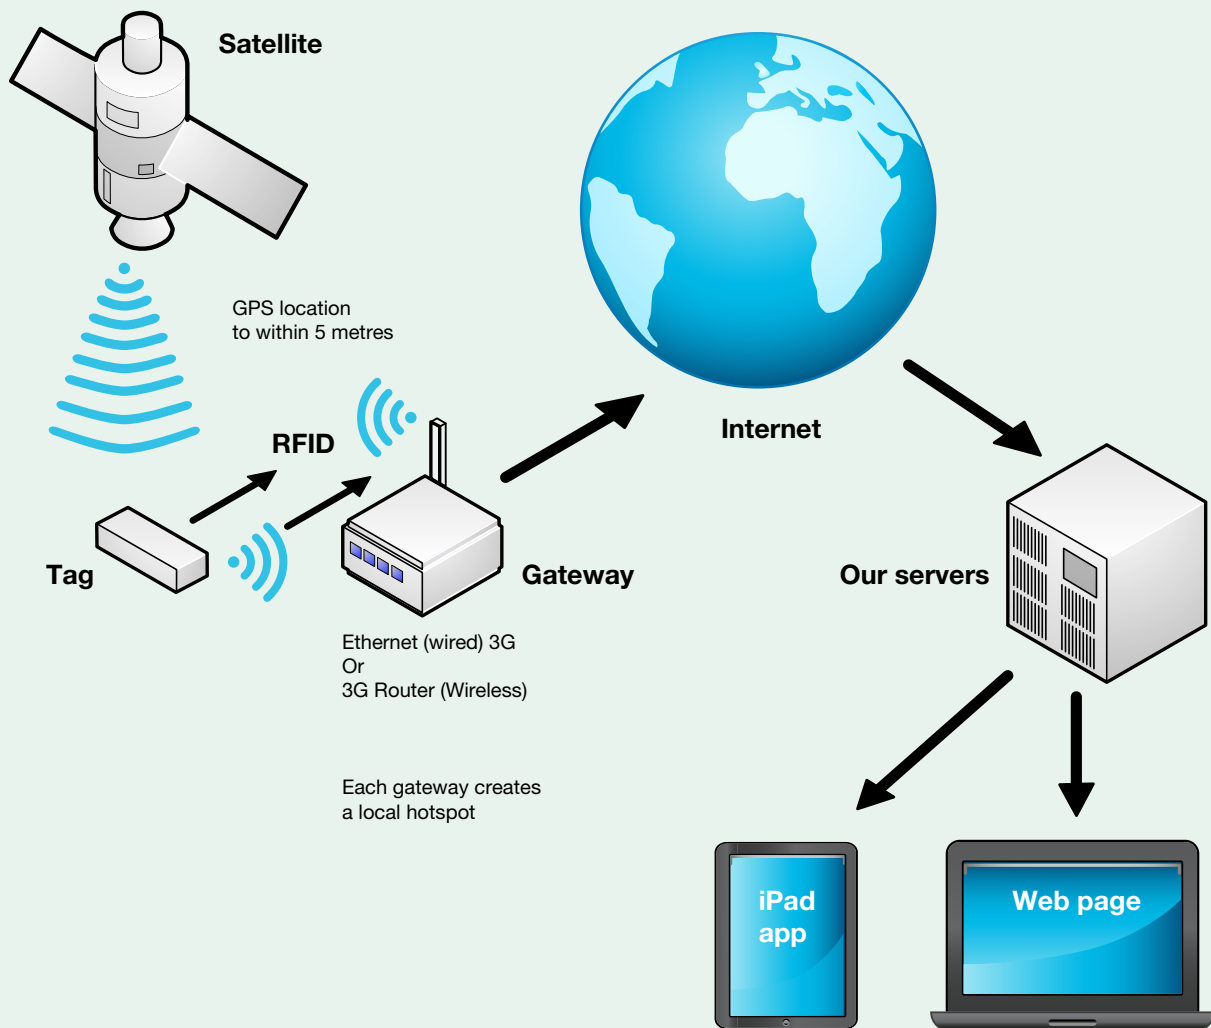

Cost effective:

- GPS Tag, £135 excluding VAT, equivalent to 12p a day for 3 years
- No SIM cost
- 3 year battery included
- Compact size
- National recovery service
- IP67 case
- 3D motion sensors
- Temperature sensors
- Designed and built in the UK
