

Foghorn Web Services Announces Launch of Cloud Management Portal and support for AWS CloudTrail

Portal launch highlights Foghorn's advanced expertise in making cloud computing more beneficial for current and future clients while working together with Amazon Web Services (AWS)

MOUNTAIN VIEW, CA—November 13, 2013 – [Foghorn Consulting](#), a leading enterprise IT consultancy and services provider based in the Silicon Valley, announced today the launch of its Web Services Portal, expanding the benefits and management functionality for its clients who are utilizing IT cloud services through Foghorn's collaboration with Amazon Web Services (AWS).

Having achieved Advanced Consulting Partner status in the AWS Partner Network (APN), a designation reserved for providers who have reached an advanced level of performance and commitment to the AWS cloud platform, Foghorn is now expanding its cloud management capabilities and environment-control tools for its clients through the Foghorn Web Services Portal and dashboard, which supports the newly announced [Amazon CloudTrail](#) service launched by AWS today.

Foghorn's Cloud Management Portal allows users to easily search, sort and browse on all events reported by CloudTrail. This integration allows users to gain visibility into events that are critical for compliance, security and IT governance. Foghorn's support for AWS CloudTrail provides significant benefits including validating and auditing change management, additional insight into security incidents, and continual improvement of IT operations.

"Through our Web Services Portal, our clients will receive greater control and oversight of their cloud environment," said Alex Roosakos, Foghorn's co-founder and Principal. "Our clients will be able to view and control cloud services budgets, audit and track their internal users and service use logs, as well as continue to elevate corporate compliance and security without sacrificing user functionality."

Launching Foghorn's Web Services Portal shows the company's continued commitment to giving its clients a targeted and strategic interface to manage their cloud, ensuring their corporate IT environment is supported and optimized with an innovative and unique Web Services tool.

Foghorn Consulting assists startups and enterprise companies as they migrate to AWS, and then manages those AWS environments once they are successfully in the cloud. By doing this, Foghorn enables customers to focus on their applications rather than servers and infrastructure.

“Foghorn Consulting consistently delivers on-time solutions that are the perfect blend of pragmatism, technical prowess and forward-thinking – in other words, unsurpassed value,” said Dean Zarras, President and CEO of Logic9s. “They have been an indispensable partner in the successful development of ClearFactor.”

Please contact Alex Roosakos for more information on Foghorn’s Web Services Portal launch or Foghorn’s cloud management services.
