

What is Schoology?

Schoology, a CODiE-award-winning learning management solution, provides a rich, collaborative learning environment that engages digital natives with technology they enjoy using. This versatile solution is designed to meet the learning and administrative needs of K-12, higher ed, and corporate settings.

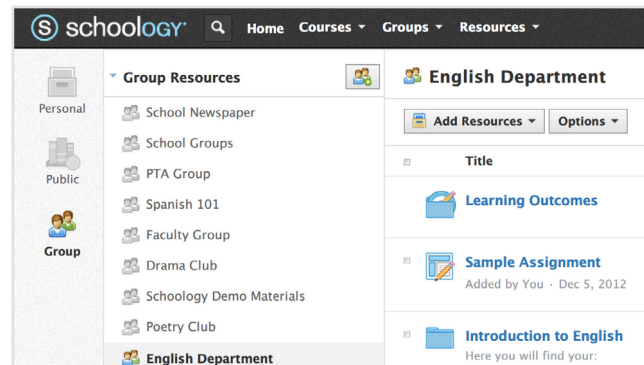

Learning Management

With dynamic content and assessment tools and performance-based analytics, Schoology enables educators to differentiate instruction, pace students individually, and implement group-based learning. Automated content delivery and grading allow educators to spend less time on redundant tasks. Online discussions improve communication and provide a means to assess comprehension in real time.

Curriculum Management

Schoology streamlines curriculum development with intuitive tools for content creation and support for a variety of third-party content formats. Content can be distributed at the school or district level via Schoology's Resource Center, a repository of personal and shared content. Alignments to Common Core, State Standards, and custom learning outcomes help educators assess concept mastery.

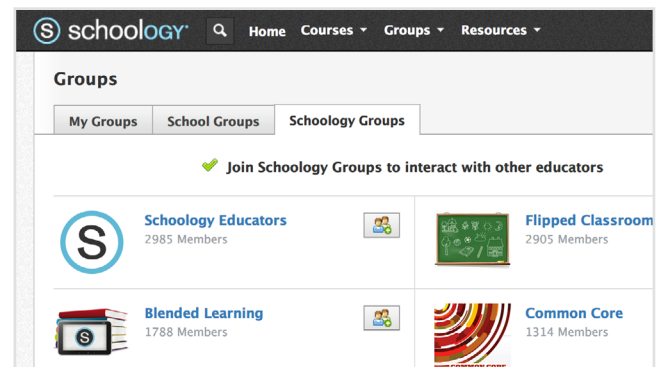

Mobile Apps

Free, robust iOS and Android apps expand learning beyond the classroom by providing the means to communicate, create and complete assignments, and administer assessments while on the go. In the classroom, Schoology's mobile apps empower 1:1 learning and BYOD initiatives.

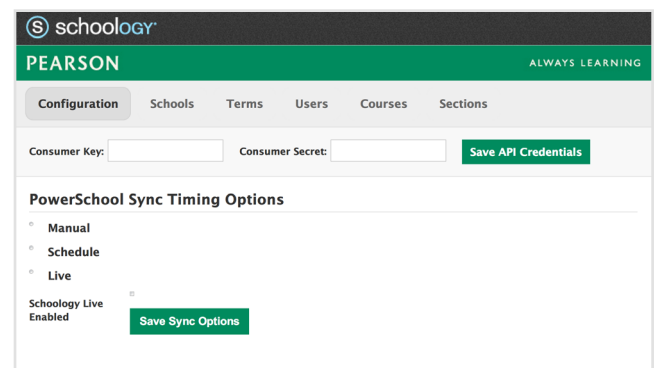

Global Learning Network

Schoology's global learning network facilitates professional development with access to a passionate community of users. Educators can join or create their own collaborative groups within the platform to exchange ideas and best practices. Instructional content can be privately or publicly shared across the network, and searched, rated, and downloaded by peers.

Open Integration Platform

Schoology's integration platform provides an effective way to centralize third-party technologies. Real-time synchronizations with student information systems automate manual data transfers. Educational apps, including those available in the App Center, can be used directly in the interface. Leveraging Schoology's API, developers can build custom integrations with existing systems.

Analytics and Reporting

Advanced analytics track in-depth statistics on grades and user activity at the individual, class, school, and district level. Data is distilled into easy-to-read graphs designed to help assess learners' needs and areas for improvement.
