iPatientCare EHR Certified by New York State Immunization Information System (NYSIIS), New York State Department of Health

iPatientCare EHR Delivers High Interoperability to New York Providers By Getting Certified for the Bi-Directional Electronic Interface for Submitting & Importing Immunization Data using iPatientCare EHR

iPatientCare, Inc., announced successful certification of its EHR by the New York Immunization Information System, New York Department of Health. This achievement will allow iPatientCare users to both submit and import immunization data electronically and directly from iPatientCare EHR, definitely one of the most unique features provided by an ambulatory EHR.

The New York State Department of Health's (NYSDOH) Bureau of Immunization is committed to promoting the health of New York State children by reducing and/or eliminating the number of vaccine preventable diseases that affect the State's children. The goal of the new immunization information system is to establish a complete, accurate, secure, real-time immunization medical record that is easily accessible and promotes public health by fully immunizing all individuals appropriate to age and risk. New York State Immunization Information System **(NYSIIS)**, in conjunction with the legislative mandate, strongly supports the NYSDOH Bureau of Immunization's objective to meet the Center for Disease Control's (CDC) Healthy People goal of 95% of children less than six years of age enrolled in an Immunization Information System with two or more shots.

About iPatientCare

iPatientCare, Inc. is a privately held medical informatics company based at Woodbridge, New Jersey. The company is known for its pioneering contribution to mHealth and Cloud based unified product suite that include Electronic Health/Medical Record and integrated Practice Management/Billing System, Patient Portal/PHR, Health Information Exchange (HIE), and mobile point-of-care solutions that serve the ambulatory, acute/sub acute, emergency and home health market segments.

iPatientCare EHR 2014 (2.0) has received 2014 Edition Ambulatory Complete EHR certification by ICSA Labs, an Office of the National Coordinator-Authorized Certification Body (ONC-ACB), in accordance with the applicable eligible professional certification criteria adopted by the Secretary of Health and Human Services (HHS).

Full certification details can be found at **ONCCertifiedHealthITProductList**.

The ONC 2014 Edition criteria support both Stage 1 and 2 Meaningful Use measures required to qualify eligible providers and hospitals for funding under the American Recovery and Reinvestment Act (ARRA).

The company has won numerous awards for its EHR technology and is recognized as an innovator in the field, being a pioneer to offer an EHR technology on a handheld device, an innovative First Responder technology to the US Army for its Theatre Medical Information System, the first to offer a Cloud based EHR product. iPatientCare is recognized as one of the best EHR and Integrated PM System for small and medium sized physicians' offices; has been awarded most number of industry Awards; and has been recognized as a preferred/MU partner by numerous Regional Extension Centers (REC), hospitals/health systems, and academies.

About NYSIIS:

NYSIIS is a free, web-based statewide immunization information system, also known as a registry, which maintains computerized immunization data of persons of all ages in a confidential and secure manner.

A statewide immunization information system will serve as a repository to aid, coordinate, and promote cost-effective disease prevention and control efforts in New York State. By two years of age, more than 20 percent of the children in the U.S. have seen more than one health care provider. As a result, multiple medical records are created and parents often lack a complete and accurate record of their children's immunization status. An IIS acts as a connection between the multiple providers a family may have and keeps track of which immunizations have already been given, and which ones are needed. An IIS helps sustain high immunization rates and low disease levels with more efficient management of information. It will also save money by ensuring that children get only the vaccines they need and improve office efficiency by reducing the time needed to gather and review immunization records.
