# tTorrent by 3D Magic LLC for Android\* Solutions Brief

# Enabled by Intel<sup>®</sup> Atom<sup>™</sup> Tablets for Android\*

File sharing has become an integral and popular part of Internet usage, allowing people to share and download files of all sizes. One of the most popular forms of file sharing is through the BitTorrent protocol, which is a form of file sharing that usually involves having a BitTorrent Client to find and download torrent files.

tTorrent by 3D Magic LLC has emerged as a very popular torrent client that allows users to download and share torrent files directly on new Intel® Atom™ Tablets for Android\*. It's a small file with big implications – users can sort through and find the files they need with a search feature that accesses multiple torrent sites, then download torrent files easily.

tTorrent has been downloaded more than 6 million times, since it is a simple yet powerful platform that searches, finds and downloads torrent files. It can download multiple torrent files simultaneously in the background while other processes are performed on the Android\* tablet. There are currently two versions of tTorrent:

## tTorrent Light

The Lite version is ad supported, and features a maximum download speed of 250 Kb/s.

## tTorrent Pro

The Pro version has no advertisements and unlimited downloads. Downloads have no speed constraints and can use as much bandwidth as the Internet service will provide. Plus, users can download torrent files that contain multiple files.

### Both versions of tTorrent include these primary features:

#### Search Engine

tTorrent has a powerful search feature based on the Transdroid Search plugin developed by Eric Kok. It searches numerous torrent sites including Pirate Bay, Bitsnoop, Mininova, Monova and more. Also, users can pre-select the torrent sites they want to search.

#### **Network Usage**

Determine what network you wish to use including WiFi only mode, WiFi or WiMAX mode. Plus, tTorrent Pro features as high a download speed as the network will allow.

#### **Enjoy Files**

Users can enjoy torrent files directly through tTorrent, including watching movies, listening to music and more.
