

DIRECT for iPatientCare Providers

DIRECT allows you to exchange patient information by secure email with any healthcare provider in the U.S., regardless of their EHR or existing IT investments. DIRECT optimizes transitions of care and is closing the gaps in healthcare communications.

Why DIRECT?

DIRECT is a HIPAA-compliant method for standardizing electronic healthcare communications, and is required for Meaningful Use in information exchange. Because DIRECT is standards-based, it is easy to send secure email to providers and patients outside your internal systems.

Optimize care transitions and reduce readmissions - DIRECT sends electronic patient information instantly, so physicians can receive instant admission and discharge notifications and provide timely follow up care.

Save money and time - DIRECT is cheaper than fax or mail, and is accessible from any office or home computer.

DIRECT is integrated in your iPatientCare system

You don't need any new software. Just contact your iPatientCare rep and begin using Direct mail from your current system.

Communicate with your colleagues and patients - DIRECT is the fastest and simplest way to send secure healthcare information to your colleagues and patients.

Simple. Secure. Seamless.
Your key to healthcare communications.

How do I use DIRECT communications?

DIRECT works just like email, but it is HIPAA-compliant and can be used to send all types of secure healthcare information. All you need to use DIRECT is an Internet connection and access to your iPatientCare system.

You can easily use DIRECT to send and receive clinical summaries, lab results, pre-op notes, patient histories, admit and discharge summaries, referrals and more.

Won't DIRECT just add another workflow?

No. DIRECT augments your current system, filling the gaps in today's communications. You will be able to use DIRECT instead of mail or fax to send patient information to your colleagues, and it is easier to save electronic information into patient records than to transfer patient information received on paper into your EHR.

How do I get started?

Contact your iPatientCare representative to get started with Direct mail.
