

# TrueConf Unites Users of Multiple Video Conferencing Servers

5 December 2013

TrueConf has introduced a new software solution for customers with large, complex video conferencing systems — TrueConf Directory. This product allows users to combine user databases from multiple TrueConf Servers and to interact with other users on any associated network.

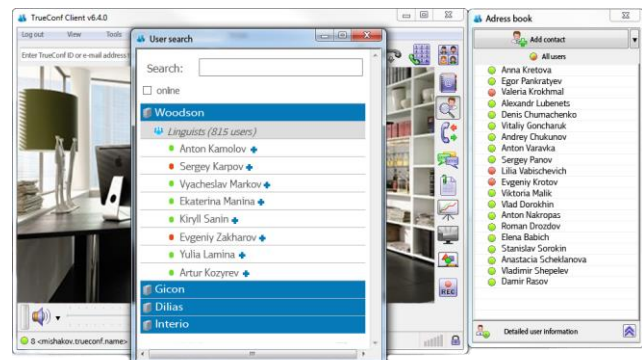

TrueConf Directory 1.0.0 is a single repository of information for users of multiple TrueConf Servers. This solution has been specifically designed for customers with large distributed video conferencing infrastructure, with multiple video conferencing servers and a large number of subscribers.

After deployment in a customer's network, TrueConf Directory changes the standard search among the local server's user group to a global search, which searches among all users and groups of several independent TrueConf Servers connected to TrueConf Directory. Clients connected to different TrueConf Servers can now directly organize video conferences and view user lists from external servers on demand.

Advanced address book searching, with the support of TrueConf Directory, is already implemented in the client applications for Windows and Android: TrueConf Client 6.4.0 and TrueConf Mobile 1.2.0.

“Recently, our customers have primarily been large enterprises and organizations with a growing number of users. The territorial diversity of their branches requires special features to facilitate their video conferencing needs. Therefore, in terms of quality of the local conferences, maintaining regional video conferencing servers instead of conducting all the video conferences through the central one is more efficient, — says Michael Gotalsky, company's CEO. “For these customers, we have developed TrueConf Directory, allowing them to implement a transparent unified directory structure of video conferencing system users and install video conferencing servers in the required quantity and location. Convenient search tools and personal address books allows you to view the status of subscribers easily and quickly.”

**About TrueConf:** [www.trueconf.com](http://www.trueconf.com)

Founded in 2003 in Moscow, TrueConf is a leading East European video conferencing vendor. The company is focused on collaboration solutions and offers an SVC-based MCU-less unified communication software platform. TrueConf has developed a full software suite suitable for corporate IP networks and all popular PC and mobile platforms, offering the convenience of both cloud-based (TrueConf Online) and server-based (TrueConf Server) video conferencing products. TrueConf Server offers a Full HD video experience and the ability to support multi-point video conferences

with up to 250 participants (using UDP Multicast).

TrueConf has facilitated over 1300 successful video conferencing solutions for governments, educational institutions, financial establishments, small businesses and corporations involved in all types of activities. The company developed the world's first 3D video conferencing application and has made significant advances in mobile conferencing and gesture-control video conferencing systems.
