

## Case Study - Healthcare & Software

Independent Software Vendor  
OMS<sup>3</sup> Uses Splashtop as a  
Mobilization Platform for  
Business Practice Management  
Software Solutions

## How OMS<sup>3</sup> Uses Splashtop to Mobilize Its Dental Practice Software

OMS<sup>3</sup> develops and distributes business practice management software. Its primary customers are dental professionals, typically oral and maxillofacial surgeons. OMS<sup>3</sup> learned that dental practices were moving towards a paperless office so they sought a solution to mobilize its dental practice management software so dentists and technicians could use iPads and other tablets. After evaluating several options, OMS<sup>3</sup> chose Splashtop because it offered advantages that no one else could match including:

**Access High Definition Images** - Access high resolution x-ray images directly on an iPad with the patient – then annotate over them.

**Cost-Effective** – Splashtop is an affordable mobile delivery platform, from initial purchase through customization and deployment. There is no need to install complex, expensive VDI products.

**Fast Deployment** - Up and running in less than an hour, Splashtop offers a quick, easy way to make OMS<sup>3</sup> practice management software available on the iPad with OMS<sup>3</sup> branding.

**No User Training** – Users can access the full functionality of the practice management software as well as other Windows applications on an iPad using the same interface and features that they are used to.

**Dictate Using Apple Siri** – Users can access Windows software plus iPad-specific features, such as Siri, in order to dictate notes or other text directly into the application.

In addition, OMS<sup>3</sup> is expanding into more business sectors such as auto dealerships and law firms, and now it can easily mobilize its branded solutions using Splashtop.

\* HIPAA - Helps you to meet HIPAA compliance

### The Challenge

Dental practices are going paperless and using iPads to comply with EMR requirements, so OMS<sup>3</sup> needed to make its dental practice management product fully functional on iPads. OMS<sup>3</sup> wanted its software to work exactly as it does on a Windows desktop, with the familiar interface that dental professionals are accustomed to using. The team sought an affordable solution that customers could deploy quickly and easily to meet strict HIPAA\* security requirements and protect patient information.

### The Solution

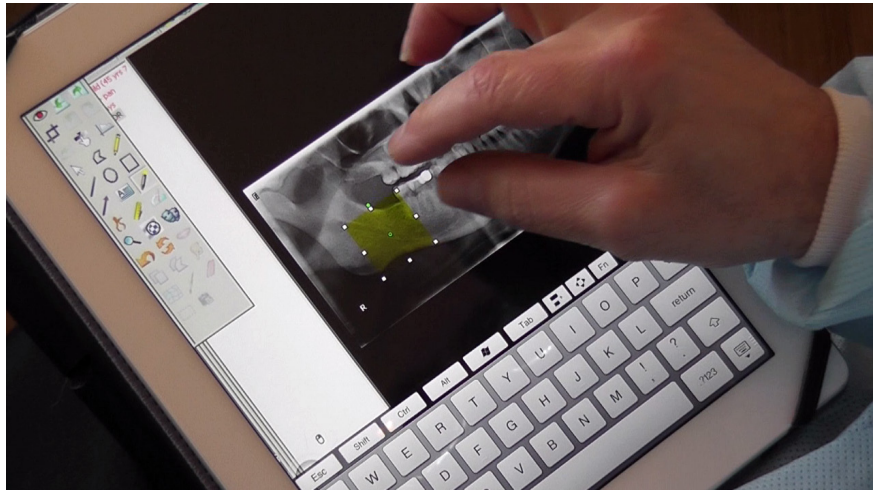

OMS<sup>3</sup> Software runs seamlessly on the iPad, with no lag time or dropped connections. Splashtop provided the necessary security to help dental practices comply with HIPAA\*. There are three levels of login required: for the iPad, for the Splashtop application, and for the individual patient record. In addition, the user interface was customized to reflect OMS<sup>3</sup>'s brand look and feel, so the user experience is entirely in the "My Practice Anywhere" software. The Splashtop team responded promptly with refinements that satisfied customer feedback to make the business experience easy, smooth, and efficient.

## Annotate High Resolution X-Rays Then Dictate Using Apple Siri

Using Splashtop, doctors have access to patient records anytime, anywhere. They are no longer tethered to the PC where the records are stored. They can review a patient record, add annotations to X-rays or update other information in the record. A doctor can bring an iPad into the patient exam room, and have the entire patient file available in a lightweight, easy, portable format. This means, for example, that they can show the patient their X-rays on the iPad, and zoom in to specific areas to help them understand their diagnosis and treatment. Doctors can also save time and money by dictating patient notes via Apple Siri on the iPad. Through Splashtop, those notes are passed directly to the patient record on a PC, eliminating the time and cost of sending dictation out for transcription, and later, reviewing the transcripts for accuracy.

“Doctors save time and money by dictating patient notes via Siri on the iPad. Through Splashtop, those notes are passed directly to the patient record on a PC, eliminating the time and cost of sending dictation out for transcription, and later, reviewing the transcripts for accuracy.”

## Splashtop Enables Innovation in Practice and Office Management

Some practices have replaced their front desk computer with an iPad. Using Splashtop, they can access all necessary information, and patients can even sign consent forms right on the iPad, then submit the signed form directly and securely into the patient record. This is a major timesaver for both the patient and the office staff. It also eliminates human error when transferring hand written information from a paper form to an electronic system. Less time spent on paperwork and more accurate data entered into the system means fewer errors and more time for patient care – a win for everyone. If care providers can focus on explaining procedures to every patient while also saving time on paperwork, it really improves the standard of care and overall experience.
