miPatientCare

miPatientCare App By iPatientCare, Inc.

The miPatientCare (pronounced as “my Patient Care”, representing mobile iPatientCare) [EHR](#) is an extension of our full-featured cloud-based EHR on [iPad](#), and is meant to provide highly mobile healthcare providers with anywhere, anytime access to patient’s clinical records. This system allows physicians to view appointments, access complete clinical summary of patients and document the complete patient encounter, while making hospital rounds or visiting hospices.

It makes the digital dashboard available to the physicians on their finger tips and allows them to stay connected with the office from wherever they are. All the refill requests, lab results, appointment list, messages are delivered to them in a secured manner and they can perform the necessary actions using a simple touch of a button. What’s more? They get alerted for all the new documents and tasks, even when they are not connected to the system.

With a carefully designed workflow and intuitive touch-screen based user interface, miPatientCare allows clinicians to:

- Add or update clinical information for a patient (vitals, allergies, history, immunizations, problems, medications, Lab Results, Clinical Notes, Orders, Referrals, patient Letter)
- Review an appointment list, and indicate current patient status and location
- Quickly access patient summary information with drill-down access to details when necessary
- Capture chief complaints
- ePrescribe with electronic transmission to pharmacies and drug interaction checking for safe prescriptions
- Resolve tasks and respond to messages

iPatientCare EHR is the ideal mobile solution for:

- Physicians who work in a highly mobile environment
- Physicians who are used to review a patient’s chart prior to entering the exam room
- Clinical staff in ambulatory offices
- Physicians who wish to access the patient records from anywhere, anytime.
- Physicians who prefers the paper, who feels that computerized system takes away their focus away from the patients.

You will need the appropriate licenses for iPatientCare EHR to use this application in a connected mode. The application runs in a demo mode, for those who does not have an EHR license and wish to preview the application.

To make this application run in a Connected mode, please subscribe to iPatientCare EHR using any of the following modes:
