

PARTS LOGISTICS >

A worldwide network of local depots designed to get parts to your customers quickly, reliably and cost effectively. **24 hours a day, 7 days a week.**

Six Important Benefits of AGS Parts Logistics

1 ESTABLISH A NATIONWIDE PARTS DISTRIBUTION NETWORK VIRTUALLY OVERNIGHT

AGS boasts a network of more than 400 parts depots in the U.S. and North America, with additional locations in Europe and the Far East. By storing your parts at AGS' incredible array of locations, you can easily create your own extensive network of parts distribution facilities.

2 AGS ACTS AS YOUR BUSINESS PARTNER

AGS will perform the time consuming, resource intensive task of inventory control and parts distribution – freeing you to focus on your core business and corporate objectives.

3 COST SAVINGS

AGS will handle your inventory and parts delivery more efficiently and at far less cost than doing it in-house. You can save significantly by paying only for the specific services you need – and will gain access to AGS' numerous parts distribution facilities without capital investment or other start-up costs.

4 YOU GAIN CONTROL

The entire PARTS LOGISTICS system is tailored to your way of doing business. You can use only as much of the network as you need – one depot or a hundred. We offer you maximum flexibility and can easily adjust services if and when your needs change.

5 WITH AGS DELIVERY DEADLINES ARE EASY

AGS offers a wide range of surface and air transportation options designed to efficiently meet local, regional, national and international delivery requirements. AGS uses their own fleet of air-ride vans and lift-gate trucks that deliver parts to your customers and field service personnel – where and when you need them.

6 IMPROVED CUSTOMER SATISFACTION WITH STATE-OF-THE-ART TECHNOLOGY

Our 24 hours, 365 days a year AGS CALL CENTER and ASPIN shipment tracking system provides you and your customers with state-of-the-art inventory and tracking capabilities operated by highly trained and courteous professionals.
