AGS Stainless to Unveil New Railing System at Remodeling Show

*New Olympus Railing System Combines Fully-Customizable Choices with Simple Installation –
Ideal for Designers, Builders and DIYers.*

Bainbridge Island, Wash., September 18th, 2013 – AGS Stainless, Inc. (www.AGSStainless.com) will debut its newest product offering – the Olympus Railing System – at the Remodeling Show, co-located with DeckExpo in Chicago, October 16-18. This new product, showcased in [booth #2044](#), joins a full-line of AGS stainless steel railing systems that offer sleek elegance at an affordable price.

The Olympus Railing System is the first component-based horizontal bar railing system in the industry and features patent-pending, universal-joint railing connectors that allow anyone to create a gorgeous, custom-built railing system without on-site cutting or welding – just simple installation with hand tools. “Hands down, this is the most exciting product we’ve ever developed and we’ve been doing this for 26 years now,” remarked Kevin Harris, Director of Sales & Marketing at AGS Stainless. “Professional installers and DIY enthusiasts will love its ease-of-installation, elegant appearance and time-proven durability; designers and builders will enjoy the ability to create distinctive outdoor spaces and chic stairways that differentiate their project and add value.”

Olympus is the latest addition to the Clearview® line of stainless steel railing systems that is well-revered throughout the industry. Clearview® is the 'clear' choice for those wanting a stainless steel railing system that adds beauty to their project. The Clearview® process is straightforward and simple: sketches and approximate dimensions are submitted to [AGS Stainless](http://www.AGSStainless.com) where CAD drawing and all details of your system are created. Each railing system is custom fabricated and shipped for on-site installation direct from the AGS Stainless factory located in the Pacific Northwest.

Olympus takes the Clearview® system to the next level. By adding a line of horizontal bar railings that eliminate the need for welding (typically done by a custom fabricator on-site), AGS distances itself from the field. The Olympus railing connects directly with AGS' new patent-pending joint connectors; no on-site cutting or welding required – an industry first. These patent-pending connectors accommodate just about any railing angle, for a quick-and-easy installation – greatly reducing the labor expense normally associated with traditional custom-fabricated horizontal railing systems. “Olympus really is a game-changer as this is the industry’s first component-based horizontal bar railing system designed to be installed by builders and DIYers,” added Harris.

About AGS Stainless: AGS Stainless Inc., (AGS) manufactures the Clearview® line of Railing Systems. Custom-made stainless steel railing systems is ALL WE DO and we are the unequivocal leader in the industry. With our innovative component-based design and all stainless steel construction, Clearview® railings eliminate the need for any on-site welding or cutting of posts and railings. Our detailing department generates CAD (computer-aided design) documents for each railing project insuring precise, project-specific fabrication. Your railing system is made to order to the highest quality standards; and delivered to you ready to be installed, with a few simple hand tools. We offer Stainless Steel components in either high-quality grade A304 or marine grade A316. Our infill options are stainless steel cable, stainless steel horizontal bar or tempered glass panel. For more information, visit: www.AGSStainless.com or call 888.842.9492.
