Liztic – now available to free music libraries from technical boundaries.

Atlanta, Georgia: Liztic is an application that is able to change the way people play and manage their music files. It's a cross-platform music player and manager now available for all major mobile devices and desktop computers. Liztic's cross-platform capabilities allow users to have the music files they want on the devices they want them on regardless of the operating system. After the release of the first versions of Liztic for MacOS and iOS early December, we are announcing the availability of public beta versions of Liztic for Android and Liztic for Windows as of December 23, 2013.

"Being able to use your music on any platform. Which is crazy to think that it hasn't been done but it is actually crazy to think that it is being done." – Nathan Butler, A&R for "America's Got Talent" and "X Factor"

Never before has it been possible to seamlessly synchronize music libraries and playlists across iOS devices, Android devices, PCs, and Mac computers. Liztic integrates a variety of audio file formats on any platform, to provide convenience for the music lover who owns digital music.

Aside from enabling cross-platform music listening convenience, other notable features of Liztic include:

- All music files in one library
- Integration of cloud drives to store music files (Dropbox, Google Drive)
- *Liztening* to High Quality audio files (FLAC, WAV)
- Streaming of music from personal devices or cloud storage

Liztic LLC: In 2012, Michael Demmer realized that music lovers are often limited because their large music libraries are locked in to specific platforms. So, in 2013, he founded Liztic LLC with headquarters located in Atlanta, Georgia. The team currently consists of 8 people who are devoted to the improvement, ease and comfort of music technology usage. For more information visit www.liztic.com.
