nGenx is a finalist for the Citrix 2013 Partner Visionary Award.

Overland Park, KS (January 2, 2014) – [nGenx](#), a leading cloud services provider of hosted applications and desktops, announces it has been named a 2013 [Citrix Partner Visionary Award finalist](#). The criteria for the Partner Visionary Award include aspects related to a broad use of technologies, a diverse offering with supported versions of [Citrix](#) technologies, unique market influence and a thought leadership approach to expanding the adoption of hosted services. nGenx was chosen, along with two other finalists, from a multitude of submissions. The winner will be announced at a special event on January 13, 2014 in conjunction with the [Citrix Summit™](#) conference in Orlando, FL.

Citrix chose nGenx as a finalist for four reasons: its ground-up approach to Desktop as a Service (DaaS), and the virtualizing of both BYO and ISV applications; its highly certified technical staff; its unique approach to integrating multi-vendor solutions; and its three-tiered white label hosting approach.

“For well more than a decade, we have been innovating in the cloud space by integrating the key technologies from our strategic partners, including Citrix, Microsoft and others,” said Al Cinelli, chairman of the board of nGenx. “This recognition from Citrix validates all the hard work, collaboration and effort that have helped us build the dynamic platform we provide our partners and customers today.”

For nGenx, a Citrix Service Provider partner, its relationship with Citrix is woven into the very fabric of its existence. The nGenx nFinity Workspace solution leverages the Citrix Receiver™ to manage the end user experience on devices accessing hosted desktops and applications via a Citrix NetScaler® controlled front door. nGenx uses the Citrix CloudPortal™ Services Manager control panel solution to give its partners full autonomy for managing their customers.

“We congratulate nGenx as a Citrix Partner Advisory award finalist. nGenx continues to be a dedicated Citrix Service Provider partner, exemplifying the high standards set by the program. nGenx is delivering high-value and differentiated services leveraging Citrix technology to SMBs and helping to grow the DaaS market,” said Ken Oestreich, senior director of product marketing, Desktops and Apps at Citrix.

About nGenx

Founded in 2000, nGenx is a pioneer of Hosted Virtual Desktop and cloud-based application delivery. nGenx works with strategic partners such as Microsoft, Citrix and others to develop hosted IT applications provided via the cloud. Through its cutting-edge technology, nGenx enables organizations to access their business applications on any device, anywhere business may be conducted. nGenx markets its solutions through both white label and agency programs supported by its nGenx Control Panel, a single pane-of-glass provisioning system that allows partners and enterprise customers complete control over their IT environments.
