

FOR IMMEDIATE RELEASE

## **Telzio Small Business Phone System Offers More Enterprise Benefits with Free Conference Call Feature**

*Telzio includes free conference call feature for all users to easily create conference bridges and host conference calls over VoIP.*

Los Angeles, California, USA – January 6, 2014 – [Telzio](#) announces more advantages for small businesses by including the free conference call feature with all plans. Telzio brings feature-rich telecommunication solutions to small businesses while significantly reducing phone expenses and eliminating IT setup and hardware requirements. Telzio's conference call services bring even more benefits to companies with teleconferencing needs by allowing users to host conference calls over VoIP.

Telzio provides hosted business phone systems with professional features that were previously only accessible by large enterprises. Before Telzio, companies paid tens of thousands of dollars to develop custom phone systems to meet their business needs. Today, Telzio offers complete business phone systems with all the [features](#) available to Fortune 500 companies that can be used by anyone at minimal cost.

Designed with the small business owner in mind, Telzio can be used to forward calls, connect to an IP phone, filter calls through a menu or opening hours, make conference calls, and route calls. Unlike most VoIP providers who charge extra for additional features and users, Telzio includes all features and unlimited users with every plan, so small businesses can easily scale their phone system as their business grows.

To take advantage of the conference call service, users can sign up for a monthly plan as low as \$1 per month by choosing a new phone number or by porting in an existing phone number. There's no downtime when porting in numbers, and there are no contracts so users can cancel or port their numbers out anytime. Telzio also offers toll free numbers from \$5 per month that come with all features and can also be used to host conference calls.

Setting up conference calls is extremely easy and done directly through the user dashboard through a few simple clicks. Users can invite callers to join a conference call by providing them with the phone number and a PIN code. Callers dial in like a regular phone call and enter the PIN to be connected to the phone meeting. Once the conference call is completed, users can choose to keep the conference bridge for future use, edit it or delete it permanently right through their web browser.

Anyone can see how easy it is to use Telzio's conference call feature at [Telzio.com/demo](#). It takes less than 5 minutes to set up a complete phone system for a small business, and Telzio's friendly chat support is always ready to help.
