## BCS Supports Food & Beverage Manufacturer

In 2010, when we first began working with this 30+ year old food and beverage industry manufacturing company they had one computer in their entire main office. All of their accounting was being done thru spreadsheets. The company had good paper processes and had been successful in growing through those decades. Now a new management team had taken over and wanted to see data and information in a much more “real-time” manner. They had a goal to become a \$300M company.

In Phase One, they began setting up an IT infrastructure and Bond Consulting Services began by assisting their implementation of Microsoft Dynamics GP® for Accounts Receivable, Payable, General Ledger and Inventory. This provided management with real-time access to core financial and inventory data which was critical to the new ownership and investment team. In Phase Two, we supported their implementation for Manufacturing Operations including Bills of Materials (BOM/recipes), Shop Floor Routers, Material Requirements Planning (MRP) and Quality Assurance/Control (QA/QC).

Today, management has real-time access to critical decision making information. They have begun the process of extending the manufacturing implementation to another product line as the company grows and expands.

BCS provides a variety of industry specific solutions that fully integrate into the Microsoft platform including Microsoft Dynamics™ GP, Dynamics AX, Dynamics CRM, and all of the Microsoft applications you already use.

### Industry Specialties:

**Manufacturing Distribution**

**Recycling Professional Services**
