Oxygen Forensic Suite 2014 Re-Invents Reporting, Adds Charts & Graphs

Oxygen Forensics updates its flagship mobile evidence discovery solution, Oxygen Forensic Suite 2014. The new release adds the ability to specify a location to store previously created reports, and enables investigators produce reports that contain charts and graphs. The enhanced reports become much easier to read, and may now contain essential information about links, connections and interactions between the owners of the mobile devices under investigation.

Oxygen Forensics concentrated its efforts on one of the most important parts of the product: the reporting. Reports created with Oxygen Forensic Suite 6.0 may now include contact photos and contain graphical charts from the Links and Stats diagram. These graphic-enhanced charts are not only easier to read, but may provide better insight into the crime being investigated. In addition to enhancing individual reports, Oxygen Forensics adds the ability to keep all reports ever created in a single location, enabling investigators with easy access to previous cases.

Re-Inventing Reporting

When it comes to solving a crime, reports are one of the most important things for the investigator. Yet, reports are often overlooked by developers of forensic software. Oxygen Forensics has always been treating reports as an essential part of the product. In this release, reporting is brought to the new level thanks to the added ability to specify a single report storage location and the ability to produce graphic-enhanced reports.

"Reports play a major role in the work of a forensic expert", says Oleg Fedorov, Oxygen Forensics President. "Key evidence is only available to courts and law enforcement authorities via a report created by the expert. Information that does not make it to the report does not exist as valid evidence. With this release, we are offering an easy way to visualize interactions, common contacts and social connections of the suspect in a report. In addition, we're opening experts the possibility to look back at any case they solved by keeping all reports conveniently organized in a single location."

The greatly increased amount of information available in today's mobile devices can easily make reports all but unreadable. Adding charts and diagrams to the reports not only makes them more legible and comprehensible, but saves many pages of text-based data.

Charts and diagrams generated by Oxygen Forensic Suite 2014 make it easy to review links, communications and interactions between owners of mobile devices and their contacts. By reviewing a single chart, one can get the complete overview of links and connections between multiple device owners in a single glance.

The newly added section now enables easy access to past reports created in Oxygen Forensic Suite. Access to past reports allows investigators access previously solved cases directly without having to re-process the data and re-create the reports.

About Oxygen Forensic Suite 2014

Oxygen Forensic Suite 2014 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 7,500 different models, Oxygen Forensic Suite 2014 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by one or several users arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location. Timeline is now available for analyzing DMG images.

Another signature feature of Oxygen Forensic Suite allows investigators to perform a global search on all devices ever

analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.

Oxygen's statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and various messengers' conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2014 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices. This makes it the tool of choice among government and law enforcement agencies, security services, and forensic organizations in more than fifty countries.

About Oxygen Forensics, Inc.

Founded in 2000, Oxygen Forensics is the worldwide leading maker of the advanced forensic data examination tools for smartphones and other mobile devices. The company is dedicated to delivering the most universal forensic solution covering the widest range of mobile devices running Android, iOS, Blackberry, Windows Phone, Symbian and other operating systems. Law enforcement and government agencies, institutions, corporations and private investigators, help desk personnel and thousands of private consumers rely on Oxygen Forensics products to ensure evidence availability in the event of mobile device data analysis and recovery. Oxygen Forensics customers include various US and European federal and state agencies such as the IRS, US Army, US Department of Defense (DOD), US Department of Justice, US Department of Homeland Security, US Department of Transportation, US Postal Service, US Supreme Court, European Commission, London Metropolitan Police, French National Police and Gendarmerie, PricewaterhouseCoopers, Ernst & Young, and many others. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot on the top of the list in relevant tests for extracting more data than competitors.
