

## VALUE-CHECK™ by Checkers introduces new Class III LED Beacons for improving safety

*Value-Check™ Class III LED Beacons are designed to provide reliable performance and exceptional value for lighter duty safety applications.*

November 1, 2013

Broomfield, Colorado: Checkers Industrial Safety Products announced the immediate availability of their new Value-Check™ Class III LED Beacons. With 26 bright LEDs that flash at 270 pulses per minute, these lights are designed to alert people of upcoming hazard areas and create a safer work environment for traffic safety, construction, mining, utilities, and many others in need of warning lights.

“This product was specifically added to our line to provide a reliable, value-priced solution for light duty applications,” said Jessica Bailey, Director of Marketing for Checkers Industrial Safety Products. She went on to say, “There are many situations where a light duty beacon will greatly increase the safety of workers and equipment. The addition of the Value-Check™ LED Beacon now allows us to offer a complete line of beacons for customers at any price level.”

Value-Check™ Class III LED Beacons meet all SAE J845 Class III requirements. Available in amber or green, these beacons feature a 26-light LED circuit encased in a twist-on, UV-stabilized polycarbonate dome to deliver bright visibility. Value-Check™ LED Beacons are easily secured using the included flange mount with three pre-drilled holes for permanent mounting or enhanced ferrite magnets for temporary mounting. The base also has a 15 ft tangle-free straight cord with a switch on the power plug that allows the user to easily turn the beacon on or off without leaving the driver seat.

The safety of people and property is the number one priority at Checkers. According to Ray Torres, Checkers' President and CEO, “We are committed and focused on educating industries to view safety as an investment and not a cost.” Checkers manufactures a wide variety of Warning Lights and is one of the world's most trusted resources for safety products.
