

SOPHISTICATED LAND SURVEYING AND MAPPING SERVICES

---

# OIL & NATURAL GAS DEVELOPMENT

# OIL & GAS

## SERVICES

### LAND SURVEYING

#### PIPELINES

Our energy teams, having surveyed thousands of miles of pipeline, understand your project needs and timeframe demands. We provide a full range of services for pipeline development from preliminary route selection to as-builts.

#### WELL LOCATIONS & FACILITIES

We provide initial staking and pad design, coordinating with the permitting and regulatory departments, to ensure approved locations are accurately designed.

#### ELECTRICAL & SUPPORT UTILITIES

Energy providers rely on our surveying and mapping service to assist in the installation and maintenance of support utilities for infrastructure projects.

### ENVIRONMENTAL

#### WETLAND SCIENCES

Landpoint's environmental teams hold a wealth of field experience and can effectively assist in project location planning while on-site, thus reducing future relocation costs and expediting the planning and construction process.

#### PERMITTING

We help clients make the best decisions pertaining to oil and gas projects by keeping them environmentally aware of potential jurisdictional wetland issues.

#### MITIGATION SUPPORT

Wetland mitigation can be a timely and costly procedure. Landpoint insures projects are completed on time and within budgets from design to construction.

## GIS

### INFRASTRUCTURE MANAGEMENT

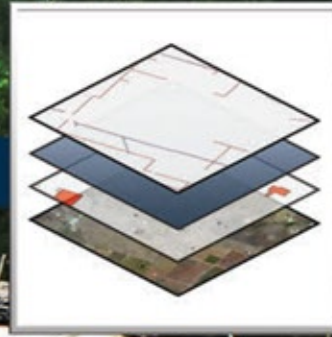

Personnel from every department will find that our Infrastructure GIS maps and services improve decision making, time management, and streamline workflows. The GIS services we provide increase efficiency and are a truly versatile asset to project coordination and management.

### INTEGRATED MAPPING

Our mapping solutions provide real-time data at your fingertips by seamlessly synchronizing survey data with maps that are accessible by computers and mobile devices. Authorized users from any department can easily use the mapping services and extract the data they need without any formal training.

### DATA CONTROL

Our analysts provide standardized database design, implementation, and conversion services. We also provide secure data hosting outside of corporate networks, giving your company the flexibility it needs to collaborate effectively.

## HIGH DEFINITION SCANNING

### AS-BUILT'S

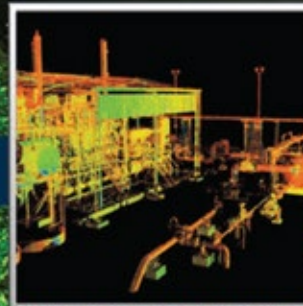

Our scanning technology allows us to quickly and safely record complex and dangerous environments. We can reduce the time and costs associated with infrastructure additions, renovations, and relocations.

### TOPOGRAPHIC MAPPING

Scanning provides a quick and reliable way to collect millions of survey grade points for topographical mapping over wide areas or for congested facilities.

### ASSET RESTORATION

Our analysts work closely with engineers to locate and repair damage to oil and gas assets including rigs, facilities, and other hard to reach, mission critical infrastructure.

Landpoint is an award winning integrated services firm that provides sophisticated solutions which traditional Land Surveying, Environmental, and GIS mapping companies do not offer. We understand your needs for data organization, timely deliverables, and responsive service. Our energy professionals have worked on many of the largest, most challenging oil and gas projects in the nation.
