

Intelligent scriptless testing helps maximize business value of your enterprise applications by accelerating time to market and eliminating the cost and complexity of test automation.

## Accelerate high-quality application delivery

In today's changing business environment where modern enterprise depends on software, the ability to release applications faster with world-class quality has direct impact on business performance. Without automation, speed and quality often create conflicting priorities, eventually leading to glitches in poorly tested applications or slower time to value due to software delays. TurnKey Scriptless Testing maximizes your automation capabilities within the HP Application Lifecycle Management (HP ALM) platform to minimize the time, cost and complexity of application testing. The software helps companies quickly create and update automated tests to accelerate delivery and minimize risk of companies' changing business requirements.

## Faster, easier test automation

Businesses demand faster delivery of high quality applications in order to provide better services and products to their customers. However, application delivery is becoming more complex as companies deploy a mix of mobile, cloud and packaged solutions to support their growing business. Evolving development processes and distributed teams also add to the complexity. As a result, automated software testing has evolved as a critical component of quality assurance and management, designed to address the speed and agility that businesses demand.

## cFactory automates the automation

**Auto-Create:** cFactory™ extends the benefits of automated testing by helping users easily create and manage test cases more dynamically. The software enables non-technical business users to create tests by simply clicking through their application screens. cFactory™ then analyzes the screens and automatically builds reusable, data-driven testing components, in a matter of seconds. These components can be easily drag and dropped together to create test flows to fully automate an entire end-to-end business process. And the software doesn't stop there...

**Auto-Generate:** cFactory™ eliminates scripting or manual step-by-step construction of test cases by leveraging a true data-driven technology. With TurnKey's dataDriver™ engine, the software analyzes your test data and automatically creates test flows that cover all possible application scenarios. This allows you to maximize test coverage for all your business processes, with the fewest number of test sets required. Instinctively, this is how business analysts perform manual testing today, yet with the speed and extensibility of scriptless automation.

**Auto-Maintain:** Change is inevitable, and when your applications change, cFactory™ automatically identifies these changes, allowing you to view and apply updates across all your test sets and data. Visual cues walk you through the process and allow you to make updates to your applications instantly. You can literally update thousands of test sets with a simple push of a button. This helps users maintain current test frameworks quickly and easily throughout the application lifecycle.

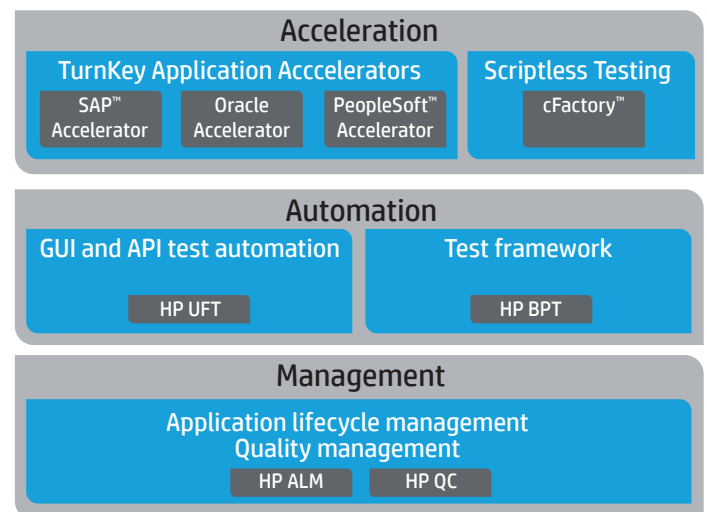

Figure 1: TurnKey cFactory™ extends HP Functional Test Automation

**Auto-Everywhere:** Unlike many test automation solutions on the market, cFactory™ is not a “one trick” point solution. Leveraging the features of HP ALM Foundation, cFactory supports most major application technologies, including HTML, Web, ASP, .NET, Terminal Emulation, JAVA, and much more. The software also supports a number of packaged applications like SAP, Oracle E-Business Suite, PeopleSoft, custom software and others. With cFactory™, you can automate entire end-to-end business processes for cross-platform environments that span multiple systems and technologies.

## Key features and benefits

- ▶ **Apply a single test automation tool for all your applications:** cFactory™ supports all major application technologies and platforms allowing you utilize a single testing tool for your enterprise applications.
- ▶ **Achieve automation fast and with minimal effort:** cFactory™ allows quick creation of new test cases, without recording or scripting. By eliminating the technical overhead, we significantly reduce the time and cost of automated testing, resulting in substantial business benefits.
- ▶ **Extend test coverage with data-driven technology:** Through TurnKey’s dataDriver™ engine, cFactory™ helps users validate all possible iterations of a business process, increasing test coverage and extending the business value of an application.
- ▶ **Reduced maintenance costs:** cFactory’s intuitive, visual process allows easy maintenance of tests by automatically identifying and updating application changes. Companies can protect their current investments in test creation, while minimizing the cost and complexity of ongoing test maintenance.
- ▶ **Leverage existing talent base to deliver automation:** Easy test creation technology allows creation, customization and maintenance of automated tests by any non-technical business user. Therefore automation of tests can be achieved with the existing in-house staff.

## About ResultsPositive

TurnKey Partner	TurnKey Benefits
<p>ResultsPositive is a business technology solutions company dedicated to helping customers reach their organizational and personal goals through the delivery of innovative software products, proven consulting, support, and training services.</p> <p><b>To learn more, visit</b>  <b><a href="http://www.resultspositive.com">www.resultspositive.com</a></b></p> <p>ResultsPositive   2250 E.
