- Focused on Delivering Strategic Solutions with Real Results

LOGIC Solutions Group is a global provider of enterprise business solutions for the oil and gas industry. Focused on Geographic Information Systems (GIS) solutions and services, our experience and industry expertise runs deep and results in valuable solutions for the energy market. Dedicated to the success of every client, LOGIC serves as a trusted adviser enabling companies to achieve their business objectives and obtain real results. LOGIC is owned and operated by VSS, a \$100M IBM Premier Business Partner with a 20+ year history. Our core solution offerings are as follows:

WELL LIFE CYCLE MANAGEMENT

LOGIC provides an integrated solution for structured and unstructured data to track the well data from prospect to spud and beyond. Features include intuitive map driven document management, a collaborative interface and stoplight driven dashboards for business intelligence and reporting.

OPERATIONAL WELL PORTAL

Deliver field metrics, statuses and documents via an integrated portal view for improved operations. These charts, graphs and maps surface information in intuitive ways to managers and engineers, utilizing the tools, data and existing investments.

RIG SCHEDULING

Many organizations use spreadsheets per asset to schedule well drilling and rig assignment. LOGIC integrates drag and drop tools with database driven stipulations, down time and transportation greatly improving drill rig scheduling.

WELL MASTER

Many organizations do not have a single version of the truth. LOGIC implements various Well Master architectures and solutions that manage data from core planning, production, engineering and accounting systems. Microsoft Master Data Services (MDS), other Master Data Management (MDM) tools sets or custom rules engines drive hub and spoke, reference or hybrid architecture and improved data quality.

FACILITIES MANAGEMENT

Manage facilities structured and unstructured data in a situational awareness and planning dashboard. Kick-off maintenance workflows and financial integration for appropriate well accounting and improved facilities management.

LAND MANAGEMENT WORKFLOW

Integrate with existing enterprise Land systems for improved views into your Land Lease data. Surface 30, 60, 90 day expiring leases to a map, kick off notifications and workflow and calculate unit ownership.

FIELD DATA COLLECTION

LOGIC enables companies to access data in the field via intuitive applications on the platform of your choice. Push maps to end users for ease of use and spatially relevant data collection for improved processes and data quality.
