

Using NOK OUT product in your arena

My name is Tom Campbell and I am the manager at Munn Ice Arena, Michigan State University in East Lansing, Michigan. I have been in the ice arena business for over 30 years. Everyone in this business knows the bad smells that are associated with hockey players' equipment, locker rooms and all related areas. It is an odor that is like no other. We pride ourselves at Michigan State in being one of the cleanest arenas in the country and we invite anyone to stop by and check it out for yourself.

That being said, there are still odors that all the cleaning in the world can't keep under control. That is until we came across this product called NOK OUT. At first I thought it was too good to be true and it was just another odor masking product. I soon found out that there was no odor other than a fresh air smell.

I researched the MSDA sheet that was given to me by Mr. Brian Gay. I listened carefully to what he was saying about the product and what it could do. I have dealt with salesman for years and I have learned what are good products and what are not. Brian was honest and straight forward with me so I decided to give the product a try.

We have a misting system on a timer that treats our locker room spaces and our loading dock area. Our loading dock area is notorious for bad food odors from our concession stands. This product really works!! There is not much more to say than that. We get compliments all the time about the clean smell in our locker rooms. I have a lot of confidence in that product for odor control and its bacteria killing qualities. You are more than welcome to stop by and smell for yourself.

Sincerely,

**Tom Campbell, Munn Ice Arena Manager
Michigan State University**

(Per phone conversation with Tom Campbell- in Oct 2007 - he has been using NOK OUT for over 4 years; and his employee sick days have been fewer since he has been using NOK OUT- A Pavlick)
