DATASHEET

Network Performance Monitoring Service

Top Three Features

- Unmatched visibility across all networks
- Detailed traffic analysis of applications, users and devices
- Portable network appliance to capture and communicate historical and real time information

Introduction:

In order to ensure the optimum performance of your IT system and the applications that you depend upon requires a healthy network infrastructure and one that that operates within its design parameters. The importance of a well functioning network is essential to cloud computing and organizations depending upon wide area networking (WAN) communications.

When network utilization and performance is the question, Proxios has the tools and resources to precisely identify how and why your network is or isn't meeting your objectives. The Proxios Network Performance Monitoring Service (NPMS) is a cloud-delivered network service, that provides end-to-end monitoring and unprecedented insight into performance characteristics such as jitter, latency, bandwidth and QoS (Quality of Service) within an IP network; actively assesses and monitors your unified communication applications including VoIP, video conferencing and collaboration; provides detailed usage analysis of users, applications and devices, and is available on both a short term (one week) or continuous basis.
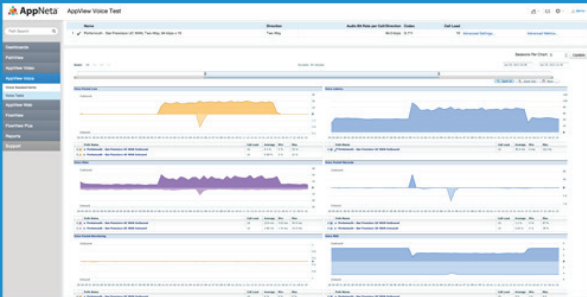

When combined with our 24/7 monitoring and response team, Proxios is able to notify you when equipment failures occur, communications are performing below design thresholds, report on application consumption, and analyze problems to isolate their root cause.

How it Works:

The Network Performance Management Service is tailored to the specific needs of each customer. The service provides network traffic analysis through the use of locally installed CloudView appliances that provide high speed data collection at each site coupled with a cloud-based portal to visualize and analyze usage patterns by site, application and user. Proxios has partnered with the industry's leading technology providers to deliver a total solution that includes 24/7/365 monitoring, alarm notification, periodic reporting, and access to all of your data and statistics through our on-line web portal. If fundamental limitations are uncovered through the service, Proxios is available to consult on solutions and implement upgrades including replacement of network equipment, procurement of new telecommunication circuits and carriers, as well as on-site installation and commissioning.
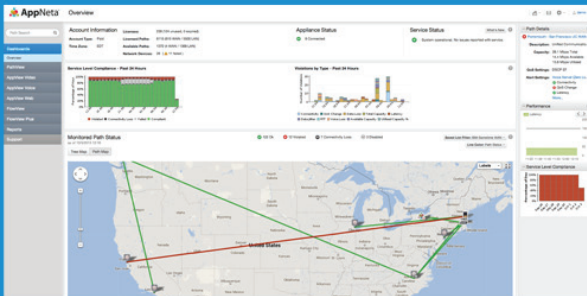

707 E. MAIN STREET | SUITE 1425 | RICHMOND, VA | 23219 | 888.342.1204

Client Overview
Provides rapid and visible assessment of overall health and performance of your network environment.

Voice Analysis
Depicts the health of the telephony environment across the enterprise and allows for stress testing to validate quality of service (QoS).

Traffic Analysis
Identifies top applications, sources and protocols in use within your network both in real time and historically. Differentiates between business and recreational usage.

Global View
Provides a geographic view into the network health across the enterprise , inclusive of both public (Internet) and private segments.

Proxios Cloud Advantage

Proxios network management is comprehensive in scope, yet flexible and affordable. Leveraging the Proxios Cloud Platform, the NPMS services provides anytime, anywhere access to the health and performance of your network and when coupled with our round-the-clock network operating center, ensures that critical alerts are seen and responded to when they occur. As a cloud services provider since 1999, Proxios has attained the experience, insights and technology partnerships to provide network management in a manner that will enable your IT infrastructures to contend with the complex demands for integrated data, voice, and video traffic.

Purchase Options

P/N 04025 Network Performance Monitoring Weekly Service, 5 Paths
P/N 04026 Network Performance Monitoring Weekly Service, 5 Paths with Voice
P/N 04027 Network Performance Monitoring Weekly Service, 10 Paths with Voice
P/N 04030 Network Performance Monitoring Monthly Service, 5 Paths
P/N 04031 Network Performance Monitoring Monthly Service, 5 Paths with Voice
P/N 04032 Network Performance Monitoring Monthly Service, 10 Paths with Voice
P/N 04033 Network Performance Monitoring Monthly Service, 40 Paths with Voice
