

## Allen IPS Tablet™

### Transforming Patient Care

The Allen Interactive Patient Systems (IPS) Tablet provides a new level of interactivity between hospitals and patients. At the patient bedside, the tablet is a single point-of-access to personal health records, condition and medicine information, and a variety of entertainment choices. It also enables patients to make non-urgent requests for any number of hospital services:

- Housekeeping
- Advanced directives
- Maintenance
- Pastoral visits
- Feedback on their care

And, because the tablet delivers important health information upon demand directly to the patient, the process that required caregivers to take requests for, collect and deliver information to patients is eliminated. The result is significant time savings and enables caregivers to focus on primary patient care.

### Empowering Patients

Giving patients direct access to their medical information provides an environment that keeps them engaged in their care and encourages meaningful

discussions with caregivers. Better informed patients become better decision makers. Our technology provides a point-of-care link to the hospital's existing electronic health record system to improve the quality and efficiency of health care. Improving patient knowledge and care experience enables more positive patient outcomes, leading to better HCAHPS results, fewer readmissions, and compliance with Meaningful Use rules.

### Integration with EMR and HIS

- Pull patient data from your MEDITECH, Cerner, Epic, McKesson, CareVue or other EMR/Health Information Systems (HIS)
- Integrate with dietary systems – Computrition, CBORD, and others, for simplified and controlled meal ordering

### Security & Safety

- Two-factor authentication and login process with auto logout
- HIPAA Compliant – no personal health or patient information is stored locally on the device
- Hospital-grade, available with theft protection

### Flexibility

- Can be deployed as a standalone device or for use with existing Allen Technologies interactive in-room solutions
- Aligns with internal hospital processes and requirements
- Remote unified monitoring and management

### About Allen Technologies

Allen Technologies has been transforming hospital TVs into state-of-the art communication and education portals for more than three decades. As one of the early innovators in interactive patient care, we continue to invest heavily in research and development to ensure that we are bringing the latest, relevant technological advancements to our customers. Our mission is to develop, customize, and deliver exceptional IT solutions at the point-of-care that address the key challenges faced by hospitals today.
