*from forest to final form*

## Thin-Kerf Blade Technology: Profitability and Sustainability

### PROFITABILITY

Thin-kerf gives you higher log yields at lower operating costs. This means you will be producing more wood from the same number of logs, and spending less money on electricity and labour to do it. It is a proven formula that is working for our customers all over the world, and it will increase your profit margins too.

### SUSTAINABILITY

By using thin-kerf blade technology to get the maximum yields possible from timber, sawmillers can contribute positively to the issues of environmental sustainability and economic development in Africa. If the next generations will be able to also profit from our forests, we must saw smarter.

Confidence in the future for the African  
sawmilling industry

Dear sawmilling friends,

I am excited for the future of sawmilling in Africa.

Wood-Mizer's presence on the continent is growing steadily as more discover the benefits of our thin-kerf blade technology. Since establishing a branch office in 2011, we have focused on building a foundation of service and support for your sawmilling success.

The results have been fantastic.

Our industry faces many challenges, but I am confident that you can be better prepared for the future by partnering with us. Please contact myself, one of my sales team, or your local dealer to see how we can be your partner in success.

## PRODUCTS *A full range of sawmilling & blade solutions*

### Industrial Production

#### Sawmill Solutions

- Sawmill headrigs
- Full log processing lines
