RBSC offers high speed, broadband and Internet services to commercial businesses, government agencies, schools, hospitals and other high broadband user service organizations in the Tahlequah, Oklahoma rural community. Tahlequah was selected as the model for establishing the infrastructure necessary for the expansion of high speed, broadband services in other rural communities. As the infrastructure of the community strengthens, the local business community is also strengthened. Communications through high speed broadband technology reaches beyond the community to promote education, entrepreneurship and innovation that creates opportunities for socio-economic advancement and growth in rural communities like Tahlequah. RBSC is harnessing the full power of the Internet to provide faster and more widely available broadband access to rural areas to close the gap between urban and rural America once and for all. Tahlequah, Oklahoma is at the forefront of advancement for this technology.

RBSC is responding to the call made by the President of the United States in 2008. In early 2009 Congress directed the Federal Communications Commission (FCC) to develop a National Broadband Plan (NBP) to ensure that every American has “access to broadband capability.” In the Transformation Order, the FCC asserts that: The FCC responded to this directive and in its published NBP stated that “Broadband is the great infrastructure challenge of the early 21st century.” The importance of broadband to the nation is reflected in the Commissions’ belief that broadband is a foundation for economic growth,

job creation, global competitiveness and a better way of life in rural America. The FCC indicated that “The next evolutionary step in bringing broadband communications and “smart” grid energy management to rural America is the deployment of shared infrastructure networks. Digital communications protocols will provide the network intelligence needed to drive a common delivery of high-speed Internet, other broadband communications services and data necessary to manage power distribution and consumption. RBSC is responding to current and future needs with an innovative business model of wired and wireless fiber optics network that provides shared infrastructure networks specifically to rural America so local, rural businesses can also have a global impact.
