

# Cubicco USA receives 180 MPH Florida Hurricane Approval on its Pre-Fabricated Modular Homes

**Miami, Fla.** — Every year in the United States, severe weather damage creates a domino effect in our economy. Businesses suffer millions in lost revenue, American taxpayers are left to foot the bill for providing emergency assistance, and insurance companies struggle to balance the costs of covering unpredictable climate events. It is with this in mind that Cubicco USA, an affiliate of Cubicco International, a Dutch company, embraced the challenge of building a structure that promises to revolutionize home ownership and design.

Cubicco has brought together precision engineering, sustainable practices, lightning fast construction, and contemporary design all under one roof. For an extremely competitive price, they can build a home in under 3 months that has approval from the State of Florida to sustain a category 5 hurricane. Its precise structure is composed of laminated wood beams and cork — all living materials that

are readily found in nature and easily replenished. The home's contemporary design is fully energy efficient while maintaining a high level of comfort and security.

Due to their strict commitment to working with local players, they have partnered with Mario R. Espineira, Jr., of Deco Truss, who has served South Florida, the Florida Keys, and the Caribbean for over 30 years. Together they will bring Americans the highest standard of comfort, safety, and energy efficiency. Cubicco is a smart living solution for everyone.

Don't miss the opportunity to see what makes a Cubicco home so unique. The worldwide introduction will take place in Miami, and is scheduled for

**March 20th, 2014.**

**As a member of the press we are happy to send you an e-Vite. The event starts at 4PM.**
