

For Immediate Release

L.D. Davis Industries, Inc., a Leading Adhesive Manufacturer, Develops Improved Adhesive for Manufacturers of Plastic and Paper Faced Drywall Corner Beads

L.D. Davis Industries, Inc. (L.D. Davis), a leading adhesive manufacturer, announces the development of a new and highly effective industrial adhesive for manufacturers of plastic and paper faced drywall corner beads. This enhanced corner bead adhesive provides significant bonding and installation advantages.

Philadelphia, PA, March 10, 2014 - A year ago, L.D. Davis was challenged to develop a more effective adhesive for both plastic and paper faced drywall corner beads than what was currently used in the industry. Although these plastic and paper faced corner beads are relatively new to the market, they offer significant advantages over their metal counterparts:

- Lightweight and flexible
- Faster and more effective Installation
- Reduction in cracking
- Consistent look and longevity

L.D. Davis loves a challenge, especially when it involves formulating a new and improved industrial adhesive product. After a few formula variations and testing, they perfected the product. L.D. Davis's customizable adhesive allows the corner bead to be easily applied within a few seconds after activation with water.

This new corner bead adhesive is being used by leaders in the industry, and many of their customers highly value L.D. Davis's capability to customize this corner bead adhesive. For example, many use a new blue tinted version of the adhesive over other products in the market. We often get asked, why the blue color? Corner bead manufacturers need to make sure there is an even amount of adhesive dispersed onto the corner bead; the blue color allows them to monitor the application to ensure a strong bond. If you do not want a light blue tinted adhesive, we can customize our adhesive to meet your needs.

"This new and effective corner bead adhesive positions L.D. Davis as the best resource for manufacturers looking for a better adhesive solution for their corner bead products," said, L.D. Davis Director of Marketing, Stacey Kreisler.

About L.D. Davis

L.D. Davis is a third generation industrial adhesive manufacturing company near Philadelphia, PA focused on helping customers solve bonding issues. Furthermore, they are North America's premier and largest protein adhesive compounder and one of the top glue suppliers in the country. Overall, L.D. Davis produces over 20 million pounds of protein adhesives each year for bookbinding, box making, food and beverage, product assembly and packaging industries as well as many specialty applications. With five warehouses strategically placed throughout the US, L.D. Davis is able to meet your specific shipping requirement. For questions and comments about our adhesive used for plastic/paper faced corner beads, please give us a call 1-800-883-6199.
