FOR IMMEDIATE RELEASE
March 11, 2014

OnRamp Announces Partnership with Neverfail, Inc.

AUSTIN, TX – OnRamp, a leading high security hosting provider with data center facilities in Texas and North Carolina, and Neverfail, a leading global supplier of IT continuity management software, announced a partnership to collectively assist customers in limiting the risk of downtime for critical business applications through the use of Neverfail's suite of IT continuity software and OnRamp's [disaster recovery](#) solutions. The news of this partnership closely follows the release of Neverfail's IT Continuity Engine 7.0, in early February, and comes just days before the opening of OnRamp's third data center facility, a 42,000 square foot facility in Austin, which will feature the highest levels of security, redundancy, reliability and infrastructure.

OnRamp, a data center services provider with expertise in building, deploying and managing high security compliance solutions for colocation, managed hosting, private clouds and disaster recovery, assists customers in developing total business continuity plans by solving the challenges associated with replication, failover and failback. OnRamp's [Full7Layer Support](#) goes above the network layer to help with anything and everything, from racking and stacking new equipment, to monitoring or repairing it on an ongoing basis. The fact that such deeply experienced OnRamp engineers are always available is especially important to disaster recovery customers, whose IT staff is far removed from their equipment by design, enabling them to effectively run remote IT environments and removing the need to travel between main offices and remote sites.

Neverfail has helped thousands of customers worldwide protect their critical business applications by ensuring that they suffer no downtime. Neverfail's suite of solutions will identify a business's critical applications and any gaps in protection that could jeopardize their ability to meet SLAs in the event of a disaster. Businesses that deploy Neverfail's IT continuity software can easily detect and respond to the broadest range of failures by automatically taking the most appropriate corrective action to keep critical applications up and running, no matter what the threat.

Together, these leaders in business continuity understand the high-availability needs of businesses today, and have worked to develop solutions that account for natural, manmade and other disasters that may impact a business's performance. "For businesses that cannot afford the down time, loss of productivity, and the resulting loss of data and revenue associated with equipment failure or disasters of any kind, coupling Neverfail's SaaS solutions with OnRamp's disaster recovery solutions is an excellent way to ensure total business continuity," stated OnRamp Chief Architect John Thurik. By leveraging Neverfail's IT continuity management software for applications running on the dedicated hardware housed within one of OnRamp's data center facilities, the two companies can collectively ensure the safety of critical IT operations for their customers.

About OnRamp

OnRamp was founded in 1994 in Austin, TX. As one of Texas' first Internet Operations companies, OnRamp's history is rooted in providing reliable and secure connectivity that enables distributed computing. Today, OnRamp is a Data Center operations company that delivers a full suite of [cloud computing](#), [high security hosting](#), [colocation](#), and disaster recovery services backed by Full7Layer Support, to help customers build, deploy and manage Data Center operations at each and every layer.

As an SSAE 16 SOC I Type II certified, PCI Level 1 and HIPAA audited company, OnRamp's state-of-the-art facilities feature the highest levels of security, redundancy, reliability and technical expertise with round-the-clock security and maintenance from a team of on-site network engineers. OnRamp specializes in assisting customers that interact with sensitive data by ensuring adherence to rigorous compliance standards including HIPAA.
