LSI® Syncro® CS Solutions
Affordable High Availability Brings Shared Storage to DAS Environments

Across industries, many modern businesses require affordable, high availability (HA) access to stored data. Many small and medium businesses (SMBs), small and medium enterprises (SMEs), and remote offices / branch offices (ROBOs) desire the improved reliability of a HA storage area network (SAN), but find the cost and complexity difficult to justify. The traditional route for these businesses has been DAS environments that can lack support for HA. Until now, there has been little in the way of choice.

LSI Syncro CS solutions are designed to offer the best of the HA, continuous uptime and failover capabilities of a SAN at a DAS price point. This lower-cost option for HA clustering in SMB, SME and ROBO environments offers application uptime not often available in traditional DAS environments, as well as the increased data storage sharing and the failover capabilities of a SAN -- for a fraction of the cost.

SIMPLE

Syncro CS solutions are based on one of the most widely deployed data protection architectures, LSI MegaRAID®. Solutions support easier-to-use, dual server option.

SMART

Designed to deliver the enterprise benefits of sharable, scalable architecture at the right price point for SMBs. Businesses benefit with reduced cost, greater ease-of-use and faster uptime..

ON

Providing affordable business continuity, Syncro CS solutions are designed to reduce downtime, increase datacenter agility and provide total cost of ownership (TCO) savings in deployment, power, managing and servicing.

SYNCRO CS SOLUTIONS

- Designed to provide High Availability for enterprise-level dual server clusters.

- Helps enable Cluster-in-a-Box (CiB) systems to deliver a redundant, 2-server node cluster solution with shared storage.

- Extend MegaRAID simplicity and reliability with LSI Fast Path and CacheCade® advanced software options and CacheVault® technology included at no additional cost.

- Support an easier-to-use, dual server option

- Helps enable HA DAS for Windows Server® 2012 and Linux® ecosystems

Syncro CS 9271-8i

Helps customers to build a CiB, providing failover, high data availability and shared DAS storage.

Syncro CS 9286-8e

Helps IT administrators to build HA systems from off-the-shelf servers and JBOD storage.
