

## How are my services allocated to servers?

cPanel(R) and Plesk(TM) hosting, which most companies use, place your account services on one server. Sectorlink Cloud Web Hosting round robins your services within our cloud server cluster. With most traditional web hosting solutions any type of service interruption to your server will cause your mail, web, database and DNS to be down leaving yourself or organization with no web communications. With Sectorlink Cloud Web Hosting this single point of failure is eliminated.
