TransMed Systems Launches BIS Free at AACR

Cupertino, CA, April 8, 2014 -- TransMed Systems, Inc. a leading developer of software solutions that facilitate exploration, reporting and analysis of clinical, molecular and healthcare operational data. TransMed announces the launch of its revolutionary *BIS Free* software.

TransMed's *BIS Free* provides unlimited access to a complete informatics solution in the cloud at no cost and requires no management by the organization. TransMed's *BIS Free* solution is a powerful Bio-Clinical Informatics solution focused on assisting users in the management of publically available data sets. Today, TransMed is offering users unlimited access to explore, report and analyze the data from The Cancer Genome Atlas (TCGA) publically available datasets. Organizations can avoid repeated downloads and expensive data copies of the most commonly used data in the cancer world while embracing a set of tools that unlock and accelerate the novel science discoveries that have long been the mission of the National Cancer Institute (NCI) and National Human Genome Research Institute (NHGRI). At TransMed, we share in their vision of impacting human health and are solely focused on how we help professionals like you accelerate discoveries.

The complete TransMed Suite™ is the only fully integrated yet open platform that extends existing healthcare investments to complete the entire translational medicine / continuous learning workflow from data aggregation, to retrospective analysis to prospective clinical application. TransMed's revolutionary solution provides an integrated bio-informatics platform enabling clinical and research organizations to:

- Aggregate data from multiple sources
- Easily explore data
- Perform research and/or practice specific analysis

For immediate access to *BIS Free* visit XBTransMed.com to understand how your healthcare organization can unlock your data and empower your users with TransMed Systems.

About TransMed Systems, Inc.

TransMed Systems develops and deploys software solutions that facilitate exploration, reporting, and analysis of clinical, molecular, and healthcare operational data. TransMed's BIS provides an integrated bio-informatics platform enabling clinical and research organizations to aggregate data from multiple sources, easily explore data, and perform research and/or practice specific analysis. TransMed's platform unlocks the potential of the healthcare repository by tightly integrating analytics with aggregated data providing self-service analysis of all bio-clinical data sources in a framework usable by clinicians and investigators. Our solutions are used by health sciences researchers as well as clinicians interested in the application of information technology to the challenges of basic research and turning research into improved clinical practices. Our Bioinformatics solution is composed of four core capabilities leveraging our meta-data driven repository that aggregates data from disparate health data sources. Learn more at XBTransMed.com.

"Our customers, like the ones here at AACR, struggle to maximize the value of their investment in data. *BIS Free* brings a set of informatics tools to the TCGA data which demonstrates how we will help you to accelerate novel discoveries." -Russ Clark, Director of Business Development, TransMed Systems
