

## **AVANU Adds More Value and Higher Return on Investment with WebMux Network Traffic Managers for Load Balancing Network Layers 4-7**

AVANU's 64-bit Platform WebMux Models Now Covered with Full Two-Year Limited Product Warranty with Hot-Swap Redundant Power Supply Options on All Models.

San Jose, CA – April 22, 2014 – AVANU today announces the continuation in adding more value to their WebMux Network Traffic Manager products for its customers where their philosophy is to deliver quality products with superior value and outstanding results. AVANU's WebMux 64-bit platform models limited product warranty is now extended from a one-year to a full two-year coverage for parts and labor and all models have the capability of supporting redundant hot-swap power supplies that are rated 80 Gold Plus for higher reliability and efficiency. The WebMux products load balance local network data traffic by managing, directing, controlling, and securing the data to its destination. WebMux comes with a robust sophisticated set of load balancing and security features with high performance in the range of 1.7 GB to 20.0 GB maximum throughput per second supporting 10GbE and with Layer 4 performance supporting 3.8 million up to 15.8 million concurrent connections. WebMux comes with a full two (2) year limited product warranty and a full one (1) year software firmware updates and product technical support.

"There are so many options for load balancing network data traffic available that we have made it our mission to stay focused in delivering high quality products with high performance and value for our customers," says Pamela Sun, President of AVANU.

WebMux is a network traffic management appliance built on the 64-bit processing platform with server-grade hardware architecture for higher performance and reliability that is easily configured and added to a local network as a plug-and-run appliance. With an easy GUI setup design, trouble-free high performance, low maintenance, and ongoing new feature additions and enhancements. WebMux meets the demanding load balancing needs for an extensive TCP-based range of applications and services including Exchange® and Lync® Servers from Microsoft® for Unified Communications (UC) unified messaging, IM presence, team collaboration, audio/web/video conferencing, mobility, and VoIP to web services and database management.
