Can your pharmacy afford a HIPAA fine?

A recent HIPAA violation resulted in a \$1.4 million jury verdict against Walgreens. Enforcement of HIPAA has become more stringent and that trend will continue. Moreover, pharmacy owners are required to safeguard both protected health AND customer credit card information. Most pharmacies lack the IT expertise and resources to safeguard customer information. ANX has an affordable solution that addresses both HIPAA and PCI compliance challenges.

SecureHIPAA

SecureHIPAA provides pharmacies with a comprehensive protection program that assists busy owners with everyday questions and issues that relate to the privacy and protection of patient information. The main features and benefits include access to our information web portal with live customer support, together with liability protection that effectively transfers a significant portion of patient data breach risk away from the pharmacy, all for a nominal cost.

The SecureHIPAA Program Includes:

- Up to \$100,000 of annual HIPAA/HITECH protection per healthcare practice for the following expenses associated with a breach of protected health information: mandatory audit, civil fines and penalties and breach notification
- \$10,000 benefit for crisis management expenses
- Up-to-date information necessary to effectively manage the ever-changing landscape of HIPAA
- Live Telephone support staffed by data security professionals
- Priority alerts
- Informational webinars
- Downloadable policies, forms and office notifications

Protection for HIPAA violations resulting in a lawsuit from:

- Theft of electronic patient files
- Physical theft of patient files
- Procedural mistake with patient information
- Employee theft of patient files or related information

SecureCompliance

ANX also provides both HIPAA and PCI compliance protection in a single, affordable solution called SecureCompliance. This solution provides comprehensive financial protection against HIPAA and PCI violations, plus tools and support to make it much easier for pharmacy owners to meet these complex requirements.

HHS fined 2 hospitals \$4.3m when patient data appeared on Google (5/14)

830+ HIPAA violation complaints with 70 coming in January 2014 alone

5.7 million patients were affected by data breach in 2013

Why ANX?

Experience

ANX began as a security idea in 1998 and has been protecting companies for over 13 years. From its inception, security technology and customer support have been at the core of ANX's corporate DNA.

Unwavering Support

ANX is at its best when there's a vital need. Phone calls are answered quickly and 97% of issues are resolved on the first call. ANX is transparent, honest and accountable. Customer satisfaction is a measurable metric across all functional areas.
