

What is the Dreamedy Learning Ecosystem?

Dreamedy is a self-organizing learning organism in the business world.

Dreamedy is supported by a foundation of interacting organizations and individuals.

Dreamedy provides economic communities with the network and software that allows them to share knowledge and services of value to each other.

The main organism of the ecosystem is community based and made up of:

- business communities,
- educational communities,
- partners,
- publishers,
- suppliers,
- competitors,
- and other stakeholders.

At the same time, each community is made up of its own members in a private learning ecosystem.

Over time, communities and members coevolve their internal and external training and learning capabilities, and tend to align themselves with the direction set by the most productive individual, group or more central companies.

The companies and individuals holding leadership roles in a learning organism may change over time, but the community values the function of the ecosystem leaders because it enables members to move towards a shared knowledge, to align their investments, and to find mutually supportive roles to thrive in their learning ecosystem.
