

SERVICES FOR IT CONSULTANTS

HOW WE HELP OUR CLIENTS

We have had extensive experience providing IT hardware, consulting and recycling services throughout our quarter century existence. We have helped many IT consulting companies with:

- Network infrastructure redesign
- Security testing
- Threat management installation
- IT hardware recycling / drive sanitation

NETWORK SOLUTIONS

We understand what it takes to upgrade full data centers and decommission EOL hardware. Our team has assisted many IT consultants with their large upgrade projects. We've helped redesign fluid system upgrades that improve business agility and we fully understand the challenges you face. Whether you're replacing malfunctioning equipment or preparing for complex data center upgrades/document management solutions; we have the technical professionals and resources to ensure you get the assistance you need. Your customers expect you to have the ability to work 100% of the time without down time - we know the importance of a strong data center. Our company has helped install and configure systems for IT consulting companies whose clients are both large and small.

SECURITY / CYBER-ATTACKS

Keeping all digital and confidential records safe, secure, and undisturbed is a high priority for many companies. The creation of intellectual documents occurs daily and the need to keep that data confidential is extremely important your clients and their business initiatives. Properly testing your environment should be done on a regular basis. We've found a way to evaluate your network so that you can proactively defend against potential cyber-attacks, such as:

- Assessments of wired and wireless networks, software applications, data storage devices, servers, and hardware appliances
- Penetration testing
- Vulnerability assessments
- Reduce costs and downtime associated with cyber-attacks, malware, and viruses

IT HARDWARE RECYCLING / DRIVE SANITATION

The technology landscape is ever changing. As IT hardware is upgraded to keep up with the latest advances in technology; ensuring that intellectual and confidential data is completely sanitized from devices is a necessary step in the upgrade process. You need a safe and secure way to recycle end-of-life IT hardware and networking gear from your clients. We actually pay for old equipment, provide a credit or (if in working condition) remarket the equipment and pay on consignment. Prior to resale or decommissioning, we sanitize data devices according to the Department of Defense, conform to R2 Standards, and are Registered as a New York State Recycler.
