

OneSCM® Overview

Collaborate Smarter. Execute Faster.

- Integration Flexibility
- Scalable and Efficient Workflow Automation
- Mobile Visibility and Control
- SaaS-based or On-Premise
- Demand, Procurement, Ship & AP Collab Modules

Desktop to Mobile

Improved Efficiency and Increased Agility

Today's supply chains are more global, diverse, and exposed to greater pressures of risk and competition than ever before. Yet many companies, especially in the mid-market, still maintain a number of manual processes and inefficient communication systems with their trading partners. As a result, the information needed to keep supply chain operations running smoothly can typically be out of sync, incomplete and spread across disparate systems. In addition, the cost of delayed responses to issues, unnecessary overpayments and manual processes can rapidly chip away at margin and cash flow. An automated supply chain collaboration solution can resolve these roadblocks, leading to increased supply chain efficiency and cost savings from PO to payment, and increased agility to address the unexpected and maintain a competitive edge.

Why OneSCM® Supply Chain collaboration software

Supply chain collaboration and management with OneSCM® enables mid-market manufacturing and distribution companies to increase visibility and control over their supply chain through real-time collaboration with trading partners. The OneSCM collaboration console allows planning, procurement, logistics/shipping, AP, and other supply chain executives to stay in step with external suppliers – either at the desktop or via mobile devices.

OneSCM connects systems and people together into a collaboration network that allows data and decision-making to flow quickly, seamlessly, and reliably. Integration with back office systems is streamlined and more activities can be automated through a powerful and configurable workflow engine.

Integration, Scalability, Visibility

OneSCM's system-agnostic integration allows disparate data and supplier interactions to be consolidated into a single system and more processes and data combined into a "single source of the truth." The flexible and scalable automated workflows can be implemented to fit current business process and cost-effectively modified as the business and requirements mature. Smart mobile devices can be leveraged for remote transactions and communication – delivering increased visibility and control from virtually any location.

Competitive Advantage

Secure and centralized collaboration

Via monthly subscription SaaS or private cloud, or on-premise, the OneSCM console is available through secure browsers only to authorized devices and accessed via multiple layer authentication. The console also leverages chat technology to support instant communications, including document attachment, between buyers and trading partners. This allows questions to be answered and discussions to happen in a secure environment, in the moment, but be stored as part of the purchase order record.

End-to-end supply chain efficiency

OneSCM delivers automation and enhanced collaboration in a number of core functions including forecast sharing, procurement, shipping/logistics and accounts payable. The central collaboration console allows supply chain management, planning, procurement, logistics, accounts payable/finance and other supply chain staff to stay in step with internal operations and trading partners/suppliers. Efficiency is improved, errors are reduced and agility is increased throughout the end-to-end supply chain.

More about OneSCM®

OneSCM, from TAKE Supply Chain, is a supply chain collaboration suite that helps companies collaborate smarter and execute faster by integrating internal systems and external trading networks to allow data and decision-making to flow quickly, seamlessly, and confidently. Solutions span Demand Collaboration, Procurement Collaboration, Shipping Collaboration, and AP Automation. For more information, visit onescm.com.

About TAKE Supply Chain

For more than a decade, TAKE Supply Chain has been selected by leading companies across the globe for solutions that deliver increased accuracy, visibility and responsiveness across their supply chains. We offer robust collaboration and data collection solutions that leverage existing and emerging technology to support the increased challenges of expanding global supply chains. Together with our customers, we are regular recipients of supply chain industry awards for technology, value and innovation.
