Mobile Voice Productivity Expands to Android OS
Smartphones, Tablets and Ruggedized Devices

Multi-OS Platform for Enterprise Mobile Voice Productivity

Mobile Voice Productivity: Multi-OS Platform

New Android Release of AccuSpeechMobile Vastly Expands Scope of Voice Productivity for Mobile Enterprise Applications

With the availability of AccuSpeechMobile's Voice Productivity Solution for the Android operating system, enterprises now can choose to voice-power existing mobile workforce applications directly from an expanded line of smartphones, tablets and ruggedized devices, supported by a Multi-OS platform.

The AccuSpeechMobile Android release further expands mobile voice control of workforce applications wherever corporations need to respond faster to customer demand, reduce operational costs and contribute to profitability.

AccuSpeechMobile's innovative mobile, multi-OS, voice technology upgrades any mobile workforce application with a fully functional voice-user-interface (VUI). The mobile software solution provides full voice functionality and seamless application integration powered *solely* from enterprise mobile devices.

“...from the distribution center,
transportation, fleet management, retail
or field services – AccuSpeechMobile's
all-mobile, multi-OS architecture can
voice-optimize the application creating
a “workforce multiplier”

AccuSpeechMobile's seamless and wireless, mobilization of voice productivity delivers an impressive array of voice control capabilities, non-invasively for any existing *supply chain or field service application* – directly from mobile devices. Voice mobilization eliminates any dependence or need for costly and complex server-based voice software, application integration or changes to the mobile app's business processes.

Expanded Multi-OS Voice Platform: AccuSpeechMobile Delivers Mobile Voice Functionality and App Integration Directly and Wirelessly from Mobile Devices to Any Custom or Commercial Enterprise Mobile Application.

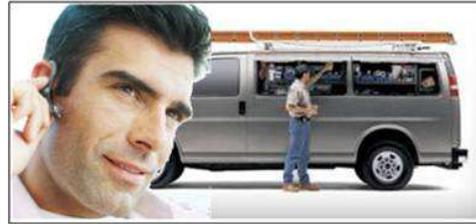

AccuSpeech *Mobile*™

Cross-Enterprise Mobile Voice Productivity

Wherever mobility leads the corporate mobile workforce – from the distribution center, transportation, fleet management, retail or field services – AccuSpeechMobile's all- mobile architecture can voice-optimize the application creating a “workforce multiplier” that streamlines business processes and speeds the collection and processing of business information.

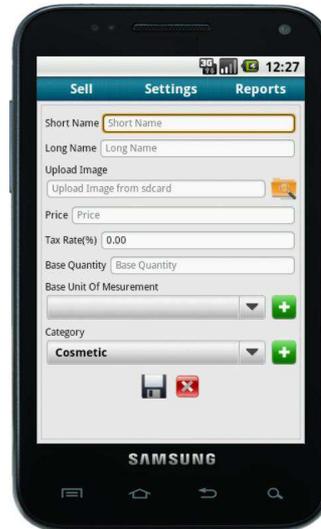

Distribution

Field Services

Transportation

Retail

With AccuSpeechMobile, mobile workforces everywhere can achieve greater productivity by using faster, more accurate voice-commands to collect and access the information they need, while maintaining manual and visual focus on their mobile tasks. The mobile solution supports any web, TE, or smart/thick client mobile application, whether *on-premise*, *cloud-based*, *hosted* or *SaaS* mobile implementations.
