

Rain or Shine, byss mobile Takes Personalized Weather Reporting Mobile

Now Available for Intel® Atom™ Tablets for Android*

Creating a personal narrative about time and place is easier than ever now that InstaWeather application is optimized for Intel® Atom™ tablets for Android*. Reporting current weather conditions takes on a whole new meaning in the app's clever, simple format. Users can take photos, access up-to-date, local conditions and comment on their experiences. This app's new compatibility with Android* tablets means a larger audience of travelers and adventurers have access to creative forecasting.

The InstaWeather app uses GPS tracking to determine users' current locations and feeds detailed climate information including temperature, wind power and direction, air pressure, and forecast. Users can snap photos, add text and share instantly with their friends all over the world. Crisp graphics, a user-friendly interface and 70 different "skins" or looks let users design their messages with frames and overlays.

Tablet Users Share the Weather and the World with InstaWeather

The latest Android* tablets equipped with Intel Atom processors enable InstaWeather users to share their surroundings while on the go. The versatility, portability and lightweight design give travelers a way to personalize and compare the weather in one simple interface. The solid performance of the Android* tablet platform means that once users have downloaded the app, they have a mobile, versatile tool with which to share weather reports.

Users can share sharp, vivid photos accompanied by stylish graphics and individualized captions from anywhere where there is an Internet connection. Friends and family can visit a closely recreated atmosphere and compare the weather via social media sites like Facebook* and Twitter*. The dependable functionality of Android* tablets gives travelers the unique ability to show off their present environments.
