Granco Clark Supplies Sierra Aluminum Co a complete handling equipment for the new press.

Belding, MI – Sierra Aluminum Co. of Fontana, California has selected Granco-Clark's handling equipment for the new press which includes a cut-on-the-fly double puller, high velocity cooling ducts, stretcher, a complete belt/conveyor system, as well as, a billet furnace and age oven.

The 2,500 ton single-action short stroke extrusion press (UBE), will be installed in Sierra's newest building in Fontana, California once the reconfiguration is complete.

Founded in 1947, Granco Clark began manufacturing billet furnaces and has evolved into a worldwide, cutting-edge, single-source supplier and leading equipment manufacturer in the aluminum extrusion industry.

With a proven track record of manufacturing the most dependable and durable equipment in the business, Granco Clark continually develops groundbreaking technology to improve its products – ranging from billet log furnaces, hot log saws, FusionBond™ to age ovens and stacking equipment.

The company was the first to introduce the integrated control system technology that has since developed into SCSExtrude – the next-generation technology for optimizing automated extrusion line performance.

Another key to Granco Clark's success is listening to customers and designing products for their specific needs. The end results are improved productivity, energy conservation, waste reduction and cost savings for customers.
