

Secure Email Management with a Trusted Business Associate

Protected Trust takes the stress out of compliant email encryption by seamlessly integrating into your organization's workflow.

Protected Trust offers simple and secure email encryption that protects your valuable digital information by ensuring privacy and compliance. Protected Trust easily integrates into your current workflow, and is simple for senders and recipients. Use Protected Trust to send secure emails when and how you want.

- **Simple to use** – Protected Trust gives users exactly what they need. Recipients access the encrypted email you send at no cost – and without registering. Guest users communicate freely with business users, with unlimited messages.
- **HIPAA compliant email** – At Protected Trust, our privacy and security specialists manage technology to give you peace of mind. Protect and exchange confidential information with business partners, insurance providers and patients. Comply with major government regulations such as HIPAA, HITECH, GLBA, SOX, and more.
- **Use your existing email address** – Use your current email address to send secure messages to any email address. Utilize our HIPAA compliant Exchange mail service or keep your current email service provider.
- **Secure email print driver** – Our secure virtual printer application lets you encrypt and send documents from any EHR/EMR application.
- **Single sign-on** – Utilize your existing network access controls (NAC) login and password for secure email access.
- **Business associates agreement** – In accordance with HIPAA regulations 45 CFR 164.502(e), 164.504(e), 164.532(d) and (e), Protected Trust will sign the BAA required between the health care provider and vendor.

Multiple apps for mobile access

- **Web portal** – Access or send secure messages from any device, anywhere, any time.
- **Microsoft® Outlook** – Our add-in for Microsoft® Outlook works in conjunction with your existing email, so you can access your secure email from virtually anywhere.
- **iPhone and iPad** – Send and access your protected messages with your mobile phone or tablet. Access your inbox and send folders directly from the native mail app.

Take control of your secure messages

Protected Trust offers several ways to further control the content and delivery of your message:

- **Recipient notification** – Lets the sender know when the protected message is received and opened. This can be handy if someone claims they never received or saw your email message.
- **Revoke an email message at any time before the sender opens it** – Ever wish you could take back an email or just reword it? This feature can be invaluable.
- **Message an expiration date** – Lets the sender specify a life span for the delivery and opening of a message. This feature reduces the risk of an unintended recipient seeing the message or an intended recipient viewing it past a deadline.

Additional HIPAA compliant services provided by Protected Trust:

Hosted Secure Exchange Email
Hosted Secure SharePoint
Managed Cloud Servers for Hosting Healthcare Applications
Off-site Data Backup and Disaster Recovery
Data Center Server Colocation

We are on your team

We understand the importance and critical nature of your business. Our job is to ensure that the computing infrastructure and availability to your business applications are secure, reliable and in peak performance.

Our privacy protection framework is designed with controls in place to keep your data infrastructure secure from unauthorized intrusion, theft, and misuse.

Let us provide you with security and flexibility for your digital assets

Protected Trust is passionate about data protection, while providing you with a reliable computer processing infrastructure. Please contact us with your specific requirements so that we may become an asset to your team.
