NTREPID TIMESTREAM®
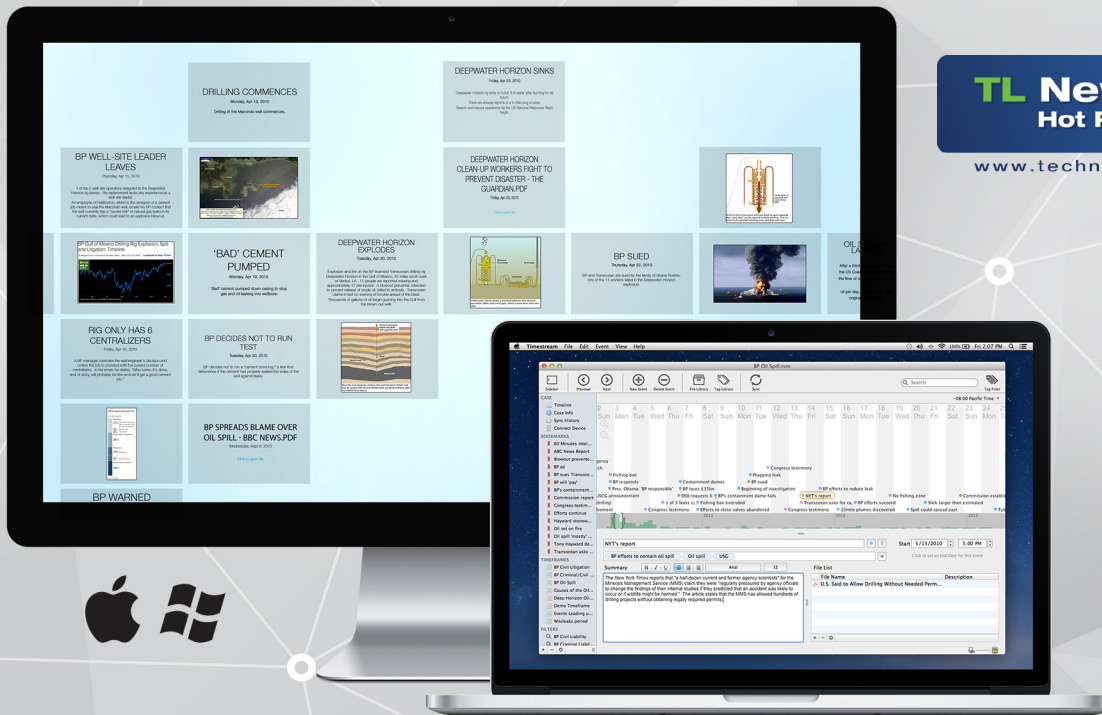

Visualize your case. Show your story.

Timestream is a suite of productivity tools that help you build complex stories on a timeline, import supporting evidence, collaborate with others, and present your case.

Organize & Visualize

With *Timestream,* you can visually organize your case on an interactive timeline, event by event. Drag and drop any file into *Timestream* to support your event chronology. Files retain metadata and document contents become searchable when connected to the server.

Collaborate & Share

Designed to break down collaboration barriers, *Timestream Connect* server enables teams to work together seamlessly on complex cases. Share case updates and new evidence. Resolve conflicts and review the complete case history, online or offline.
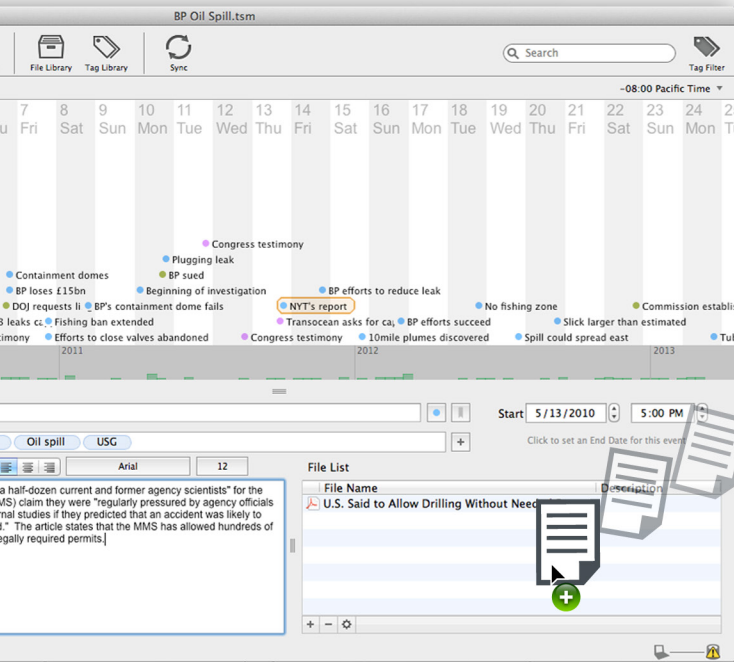

Present & Report

Export elegant presentations and reports from your timeline with *Timestream Projects*. Avoid additional work by creating slides and reports from events already in your timeline. All of your *Timestream Projects* remain separate from your case data and can be modified extensively.

It's not just a timeline. It's your whole case.

Every case is a story,

but building a compelling story can be labor intensive and challenging.
*Timestream* revolutionizes the storytelling process through intuitive, streamlined tools.

Timestream timeline app

- Organize and visualize your case on an interactive timeline.
- Intuitive drag and drop interface with tagging, filters and more.
- Fully indexed fields and attachments for easy keyword searches.
- All attachments stored within the portable case file.
- AES case encryption.
- No installation required.
- Mac and Windows compatible.

Timestream Connect server

- Manage synced cases directly from your *Timestream* app.
- Work offline and synchronize on your time.
- Collaborate internationally with robust time zone support.
- Review complete case sync history.
- Deploy in the Cloud or on-premises with easy web-based configuration.

Timestream Projects feature

- Tailor your timeline content, then export the data into a presentation or report that will open on virtually any computer.
- Create HTML5 presentations that run in any modern web browser with navigation, zoom, media player, and document viewer capabilities.
- Export universal Rich Text Format (RTF) reports.
