

Trapp Connect to Provide High Speed Wireless Internet to K-12 Schools

Blended bandwidth Internet promises fast, ultra-reliable connectivity

Scottsdale, AZ. – July 31, 2014— Scottsdale-based Trapp Connect, trappconnect.com, today announced an affordable, super-fast and ultra-reliable Internet service for schools with speeds up to 100 times faster than current ISP's. With the revision of e-rate priority 1 funding for wireless networks, Trapp Connect is able to provide the advantages of super-fast internet plus a 100% network uptime guarantee to Arizona school districts.

Previously available only to data centers, Trapp Connect's ground-breaking blended bandwidth Internet is now being offered to K-12 schools looking for reliable high-speed internet that is both efficient and e-rate compliant. Now that 90% of a school district's wireless infrastructure is covered by priority 1 funding, schools now have the ability to deploy advanced wireless networks powered by Trapp Connect's equally capable blended bandwidth. School districts will gain ready access to the super-fast, redundant and affordable IT infrastructure that today's educators crave.

"Being able to provide this high level of internet service to the people who need it most – Arizona's students – really excites us as a company," said Cody Engilman, VP of Sales, Trapp Corp. "Putting this redundant internet into the hands of our educators at a subsidized price is truly a huge step in the education technology sector. It's like having multiple carriers such as Google Fiber, Verizon and AT&T simultaneously connecting your district's end users to the internet."

The new service leverages carrier class network architecture, route optimization, advanced data security, and a blend of multiple Tier 1 carriers to reduce latency and make possible a 100% uptime guarantee with speeds up to 10 GB/s. Fast, reliable, and redundant service from Trapp Connect gives school districts the flexibility to withstand carrier outages or performance problems by automatically adapting to changes in the Internet.

In addition to blended bandwidth, Trapp Connect can leverage their buying power with hardware manufacturers to secure the best possible selection and pricing. Utilizing Trapp Connect for internet services translates into a full service implementation plan, when needed, from installation to remote network monitoring.

About Trapp Connect

Trapp Connect, a sister company to Trapp Online, brings improved Internet reliability, performance and security to companies around the world. Customers enjoy easy-to-manage, constant Internet connectivity and mind-blowing 24/7 support and monitoring from an experienced US-based team with a level of technical expertise that is above the typical ISP or data center.
